Leverage:

- Minis vs Micros
- No theta decay / greeks

Example:

- NQ (Mini) vs MNQ (Micro)
- \$20/point vs \$2/point

Point - is the smallest unit price can move left of the decimal

Tick - is the smallest unit price can move right of the decimal

ES / NQ

Point = Handle

4 Ticks = 1 Point / Handle

- Buy market: Buy at best available price (ask)
- Sell market: Sell at best available price (bid)

Trade execution is simply the art of waiting and it's the hardest thing to do.

There's always going to be another play.
Your model will show up again.
So why do you sit at the desk all day
long itching to get in, Sounds like an
addict to me.

The cost of not locking in is spending
the rest of your life clocking in.

Trade Plan:

Higher timeframe PDA (Monthly / Weekly / Daily)

manage the risk
respect the plan
control your emotions
journal every trade
collect the data and work on it
refine your edge AKA improvement
Rinse & Repeat

The market rewards those who are patient and disciplined. Not those in a hurry.

Your life actually changes overnight
It just takes years to get to that night

Intermediate timeframe (4H / 1H)

Simple checklist

- ☒ HTF PDA - IRL → ERL / ERL → IRL
- ☒ Stop Hunt
- ☒ Unicorn Entry

Once you have a refined system its game over.

Nothing will change

Until you go to war with yourself.

Lower timeframe (15M / 5M / 1M)

The unicorn is "one of the strongest Algorithmic entry patterns you can ever have"

1. Draw on liquidity
2. Manipulation
3. Breaker + FVG
