

MMXM is all you need

Dealing range & HTF PD array

HTF external and internal range liquidity

Daily SMT / Stop hunts

Low Resistance Liquidity Runs (LRLR)

Swing trading checklist on what I look for in an MMXM:

- High-Impact News On The Week
- HTF PDA (M/W/D) Context (IRL/ERL)
- Entry (H4/H1)
- Relative strength/weakness as added confluence
- Strict 2R target

Mark HTF stop hunts it's must.

Spot the PD array if price starts reversing mark the Smart money reversal (SMR) to anticipate the MMXM's
First mark the Draw on liquidity and anticipate the distribution stages of the MMXM's

- Economic Calendar
- Weekly Profile
- Premium & Discount
- IRL / ERL
- IPDA 20 Day
- Key Level
- Weekly Open
- Previous Day Run
- Candle Closure
- SMT
- H4 and or H1 cisd

One shot one kill
(OSOK) Checklist

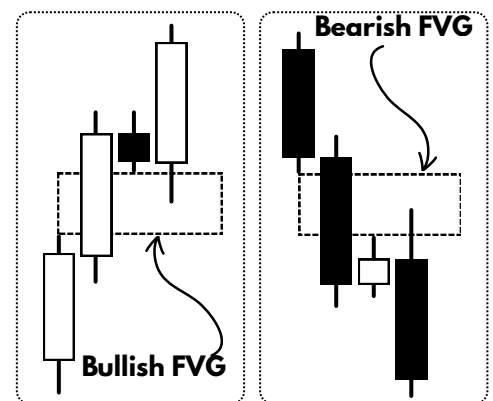

- Mark the midnight opening price Buy below / Sell above midnight opening price.
- Relative Strength Analysis (Optional but increases probability).
- Continuation Purge > Buy program or Sell program activation.
- Timeframe aligned MMXM - Down or Up closed candles will now support price & PD array's in line with the draw should hold.
- Premium & Discount of range & Mitigation blocks for pyramiding

For NY session B&B model:

- Draw a vertical line at 8am and look left for the failure swings (LRLR signatures).
- Premium and discount array retracement or stop hunt for framing a trade.

PD Arrays to watch:

- Fair value gaps(FVG)
- Inverse fair value gaps(IFVG)
- Orderblocks(OB)
- Breaker Blocks
- Mitigation Blocks
- Redelivered Rebalanced(RDRB)

Newyork Session Bread And Butter Model:

8am - 12pm is our killzone for this model

8am - 12pm > Continuation or Reversal

9am - 10:30am is the sweet spot in the killzones for reversal days for reversal

10am - 11:30am when london is a large range day or we have a red folder at 10:00am

When to avoid Newyork session:

When london session is extremely large

When we have the red folder later in the afternoon (eg FOMC at 14:00)

The day before news events such as NFP or CPI

Timeframe Alignment for MMXM's:

Monthly > Daily

Weekly > 4H

Daily > 1H

4H > M15

1H > M5

M15 > M1

M5 > 30 seconds
don't use m5 > 30 seconds
timeframe without proper
confirmations make sure
you followed all the rules
and following your
trading plan.

TIMEFRAME PERSPECTIVES

- Long Term Perspective (LTP) = Why price should go where it's going.
- Intermediate Term Perspective (ITP) = How price should get there.
- Short Term Perspective (STP) = Entry for our trade execution.

LTP > Draw on liquidity and HTF PD array.

ITP > Structure & Continuation purge.

STP > MMXM & Entry.

WEEKLY RANGE TRADERS:

LTP > MONTHLY (Can use Weekly when Monthly is not clear) = Draw on liquidity & HTF PD Array.

ITP > D1 = Structure & Continuation purge.

STP > H1 = MMXM & Entry.

INTRADAY TRADERS:

LTP > W1 AND OR D1 = Draw on liquidity & HTF PD Array.

ITP > H1 = Structure & Continuation purge.

STP > M5 = MMXM.

SCALPERS:

LTP > H4 (Can use D1 when H4 is not clear) = Draw on liquidity & HTF PD Array.

ITP > M15 = Structure & Continuation purge.

STP > M1 = MMXM.

Daily swing highs & lows: turning points in the market & the easiest model you will ever have

Every turning point in the market forms a swing high or low...

Now on a lower time frame this is meaningless

However, on a daily chart if we see this form at a key level and we have a draw on liquidity still present, this becomes crucial & we can frame an entire model behind this idea.

Anticipating high probability price moves with swing highs and lows

We need to see them form at a key level:

If bullish we want to see swing lows form at discount array's and/or after running another swing low.

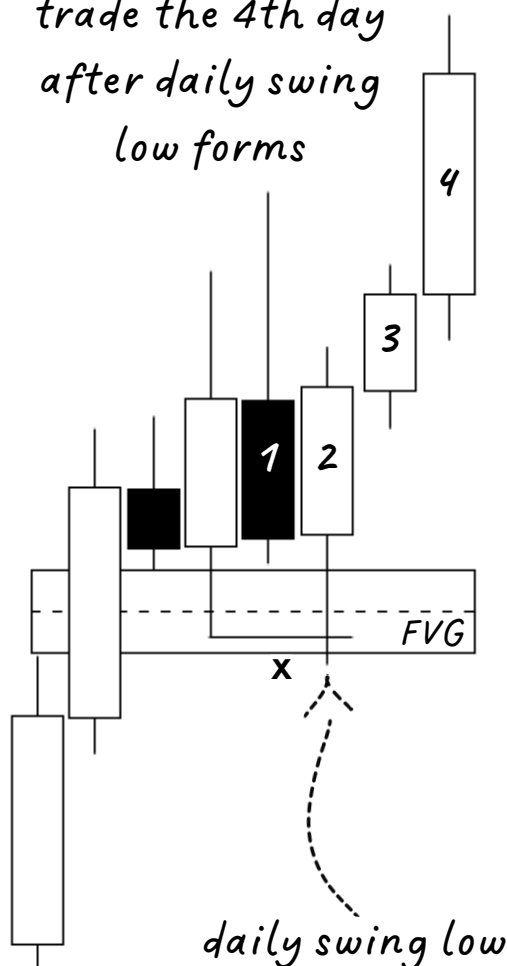

If bearish we want to see swing highs form at premium array's and/or after running another swing high.

Daily swing highs & lows

This is hands down the easiest model you will ever have, you may not find a high probability trade on one pair every week but within a basket of a few pairs you will find one high probability trade every single week using this model.

All you need is one trade a week to make a living trading and pass all the funded accounts you want.

trade the 4th day
after daily swing
low forms

The MMXM Trader ✓
@theMMXMtrader

Non news days =

- Low hanging fruit TP's.
- Aggressive partials.
- No pyramiding.

or

- No trade at all.

(my personal preference)

The MMXM Trader ✓
@theMMXMtrader

Journal every single day without fail, don't be lazy;

Master one model.

Master one asset.

Master one session.

Master one window of time.

The MMXM Trader ✓
@theMMXMtrader

Fall in love with the HTF concepts and everything else will fall into place.

The MMXM Trader ✓
@theMMXMtrader

If you are struggling try this;

1. Trade only in the direction of the HTF IOF.
2. Locate an HTF bearish Key Level.
3. Wait for a run on a PWH, PDH or PSH.
4. Target a PWL, PDL or PSL.
5. Sell above the true open.
(vice versa if bullish)

Is that complicated?

The MMXM Trader ✓
@theMMXMtrader

Previous Day High (ERL) > H1 Bullish FVG (IRL) > m15 MSS / SMT > Only Short Above 00:00.

Vice versa for longs.

That's a complete model for you.

Is that complicated?

🔗 Last edited 9:05 PM · 19 Mar 24

The MMXM Trader ✓
@theMMXMtrader

HTF Enigma.

Bullish:

Bullish DOL > Discount > IRL/ERL > SMT > Wick Below > Close Above.

Bearish:

Bearish DOL > Premium > IRL/ERL > SMT > Wick Above > Close Below.

1:13 PM · 01 May 24 · 78K Views

CORE CONCEPTS

- OHLC & OLHC Power Of Three
- Failure Swings: Low Resistance Liquidity
- Previous Days Highs & Lows
- Daily Swing Highs & Lows
- Internal & External Liquidity
- Order Pairing
- Orderblocks
- IPDA Market Cycles
- Breakaway Gaps And BPR
- DXY Consolidations

MARKET MAKER MODELS

- Timeframe Alignment
- Mitigation Blocks
- How To Trade MMXM's
- The Silver Bullet

TOP-DOWN ANALYSIS

- Long Term Perspective
- Intermediate Term Perspective
- Short Term Perspective: NY Session B&B Model
- Putting It All Together

MODELS & RISK MANAGEMENT

- Universal Model
- Asian Session Model: A Hidden Gem
- Passing Funded Accounts

The MMXM Trader
@theMMXMtrader

If you want you're AHA moments when backtesting then backtest according to the previous weeks economic calendar.

Focus ONLY on the high impact news (red folders).

All you need:

- Economic Calendar
- True Week and or Day Open
- Premium & Discount / Arrays
- Liquidity Pools

Understanding how to navigate the economic calendar will solve the majority of hurdles you are probably having from Time, Price & Psychology.

Understanding it filters:

- Day Of Week
- Time Of Day
- Bias / Draw On Liquidity
- Forecasting Session Moves
- Manipulation / Inducement

If you struggle with patience it will solve that problem as well.

The MMXM Trader
@theMMXMtrader

LTP > ITP > STP Alignment = Buy or Sell Program.

Premium to Discount or Discount to Premium.

6:33 PM · 03 Mar 24 · 58.6K Views

Trading Checklist Example

WEEK PREPARATION:

- Cot & Seasonals
- Economic calendar News
- Weekly Profile

DAILY PREPARATION:

- Is PA favorable? (Avoid consolidations & overexpansions)

- Determine DOL

- Determine most likely daily OLHC

TRIGGER:

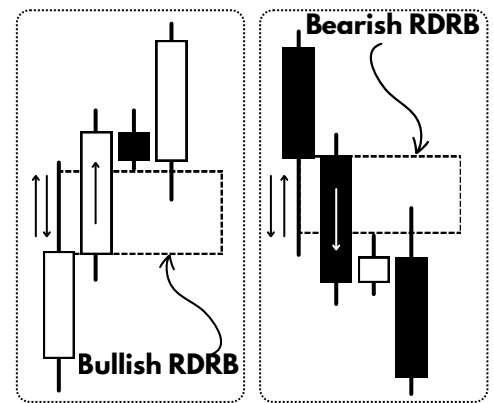

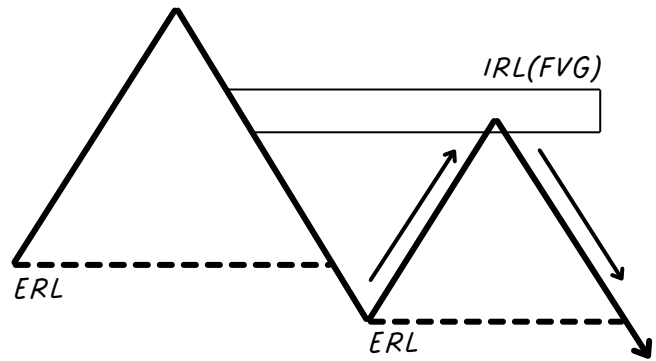

- Narrative
- Establish a POI on H1
- Combine with session profiles

{Short Term Trade Execution on H1}

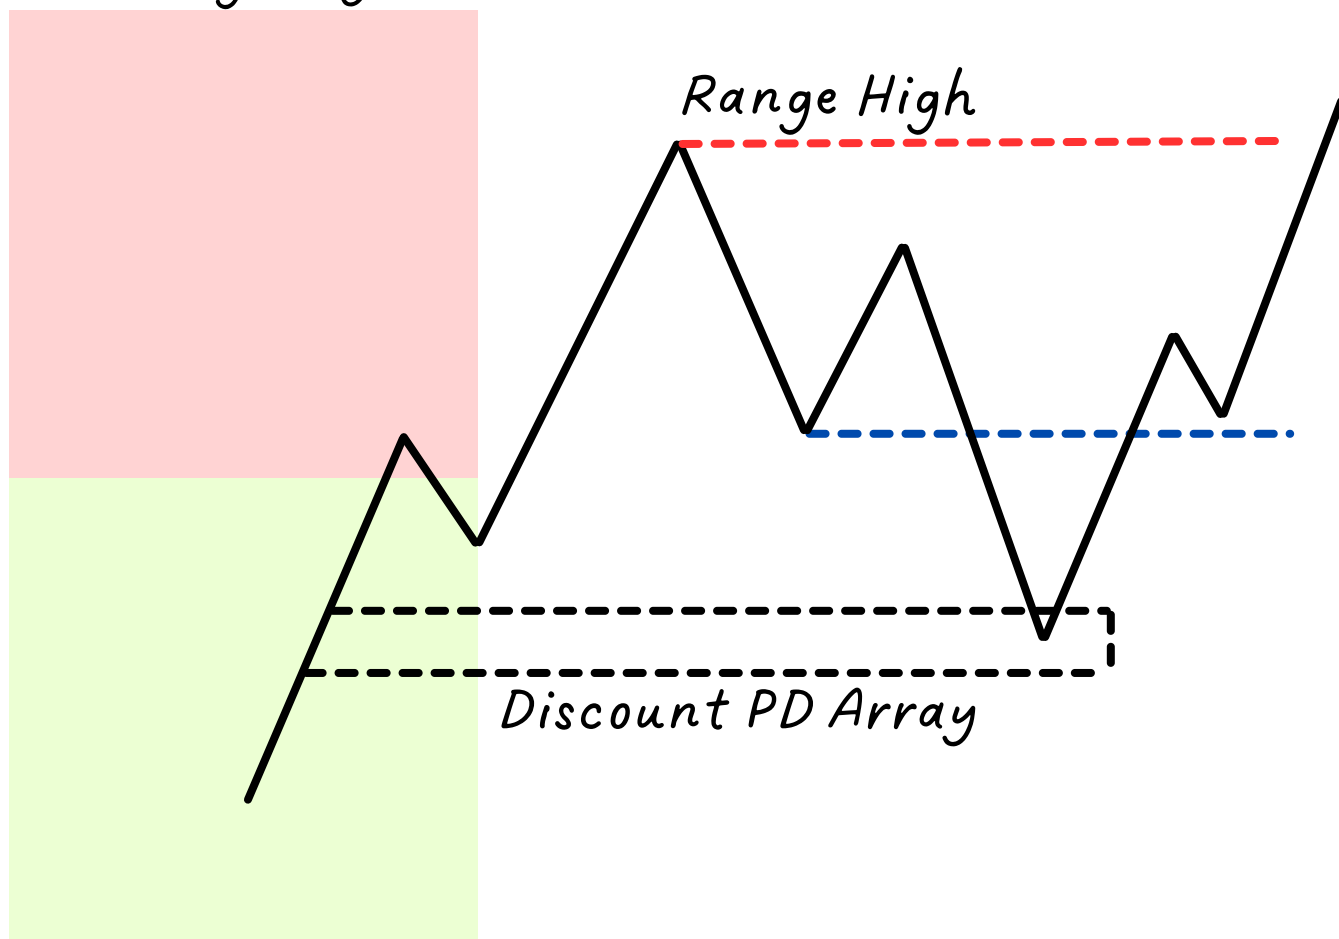

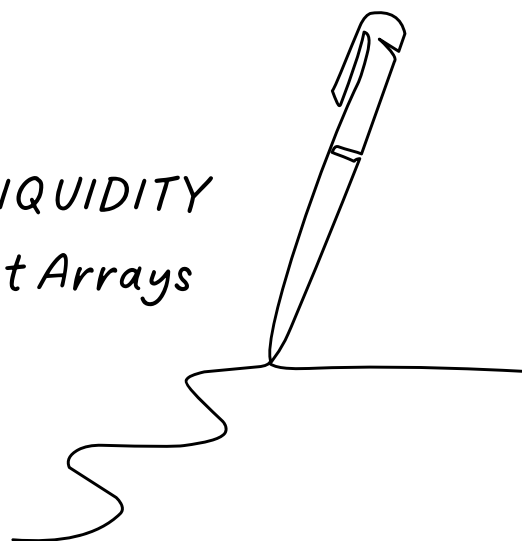

LTF EXECUTION:

- Killzone
- Entry Model: LTF confirmation / Retracement entry
{Intraday Execution}

OPENING PRICE > KEY LEVEL > STOP HUNT > SMT > CISD

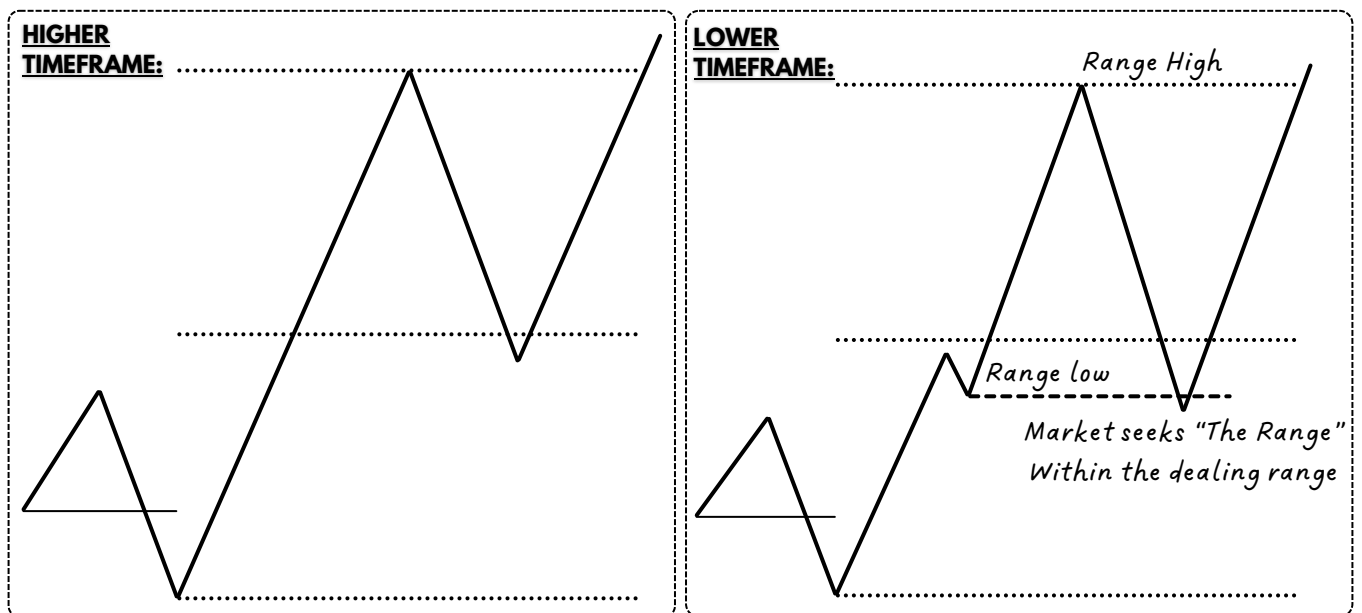

- HTF IRL - ERL
- SWING POINT DAY 2 OR DAY 3
- SMT AT THE INTERNAL RANGE LIQUIDITY
- IPDA 20 Day Premium Vs Discount Arrays
- Day Of the Week
- Time Of the Day
- H1 Dealing Range
- Daily Profile Confirmed in M15 Structures
- Economic Calendar
- Relative Strength Analysis (Individual Currency Futures Chart)
- H4 PO3 with the Candle Closures
- Focusing Only On 3am And 9am

The Only Thing The Market Cares About Is Liquidity In Terms Of Old Highs And Lows; It Doesn't Care About PD Arrays Or Anything Else Besides Time.

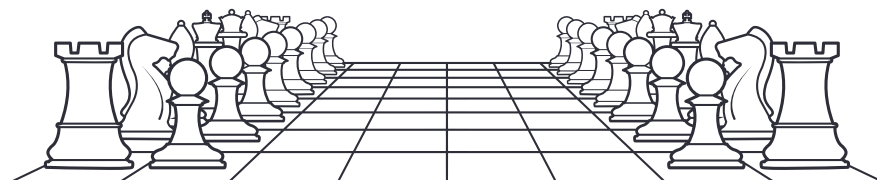

The Market Will Seek An LTF "Range" Inside Of An HTF Price Leg Or PD Array; How Deep Into A Price Leg Or Key Level The Range Is Determines How Deep Into A Premium Or Discount Price Will Go.

When DXY hits a HTF key level we look for HTF SMT between the Bonds Triad. The DXY & Bonds are opposing assets.

ZB - 30Y, ZN - 10Y, ZF - 5Y.

The Interest Rates are the foundation to movement in the Dollar based markets.

Timeframe Alignment For SMT And / Or Continuation Purges > Entries :

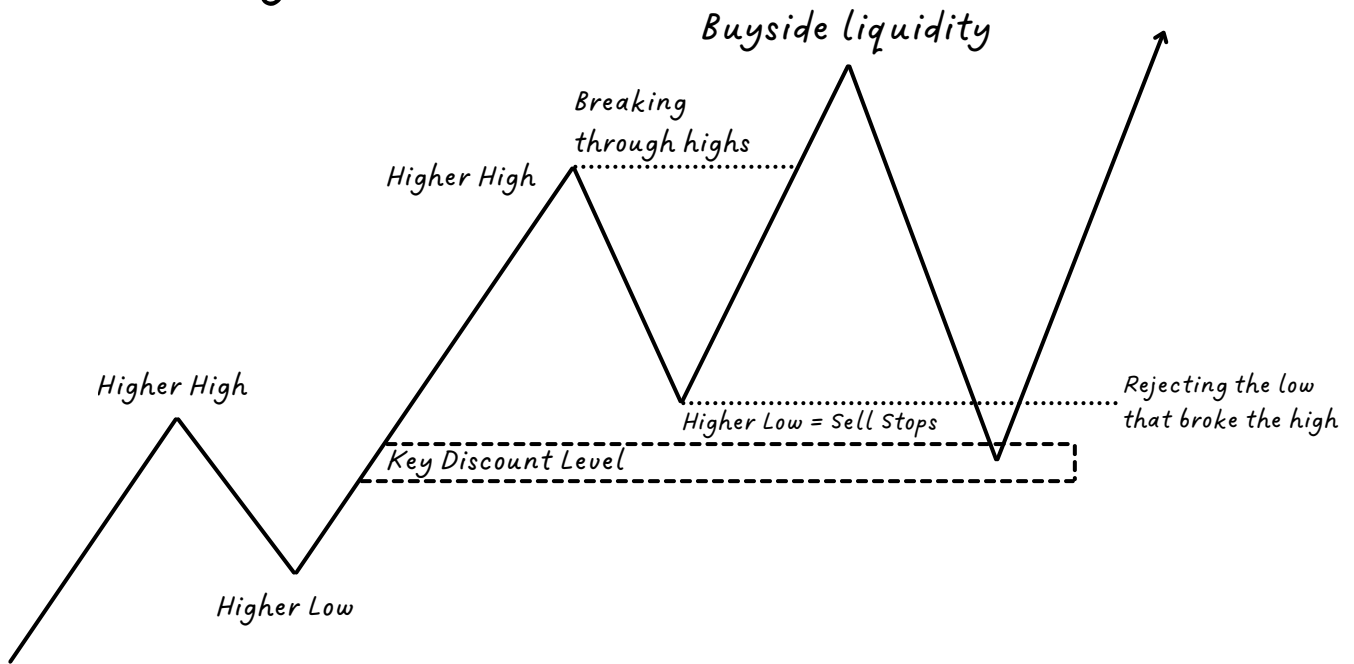

- *Monthly Swing Model > H4 SMT and or Continuation Purges > H4 and or H1 CISD OB or 50%-62% retracement.*
- *Weekly Swing Model > H1 SMT and or Continuation Purges > H1 and or m15 CISD OB or 50%-62% retracement.*
- *Daily Swing Model > m15 SMT and or Continuation Purges > m15 and or m5 CISD OB or 50%-62% retracement.*
- *H4 Swing Model or Previous Session High Run > m5 SMT and or Continuation Purges > m5 CISD OB/ 50%-62%.*

Intraday Trading: Classic Sell Or Buy Day = Day 3 And Or 4 In The Daily Swing Point Model.

- *Session Highs to Lows or Lows to Highs*
- *Previous H4 Candle Runs*
- *We use m5 SMT or Continuation Purges after either is swept.*

Classic Buy and Sell Days are more likely to form on a day with a high impact news event, day 2 that takes the high or low in a swing model is also likely to have high impact news as it's manipulation.

Double Purge:

Why do you need to have double purge in your toolbox?

Markets will only reverse when the price knocks out both participants in the market.

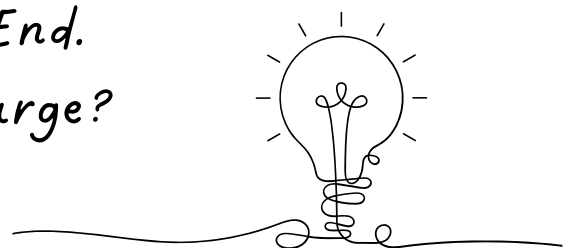

- The run of both sides leads to low-resistance liquidity runs
- The double purge is also where your SL will be safe given you have the correct narrative
- True PD Array's such as OBs and Breakers form after the Double Purge

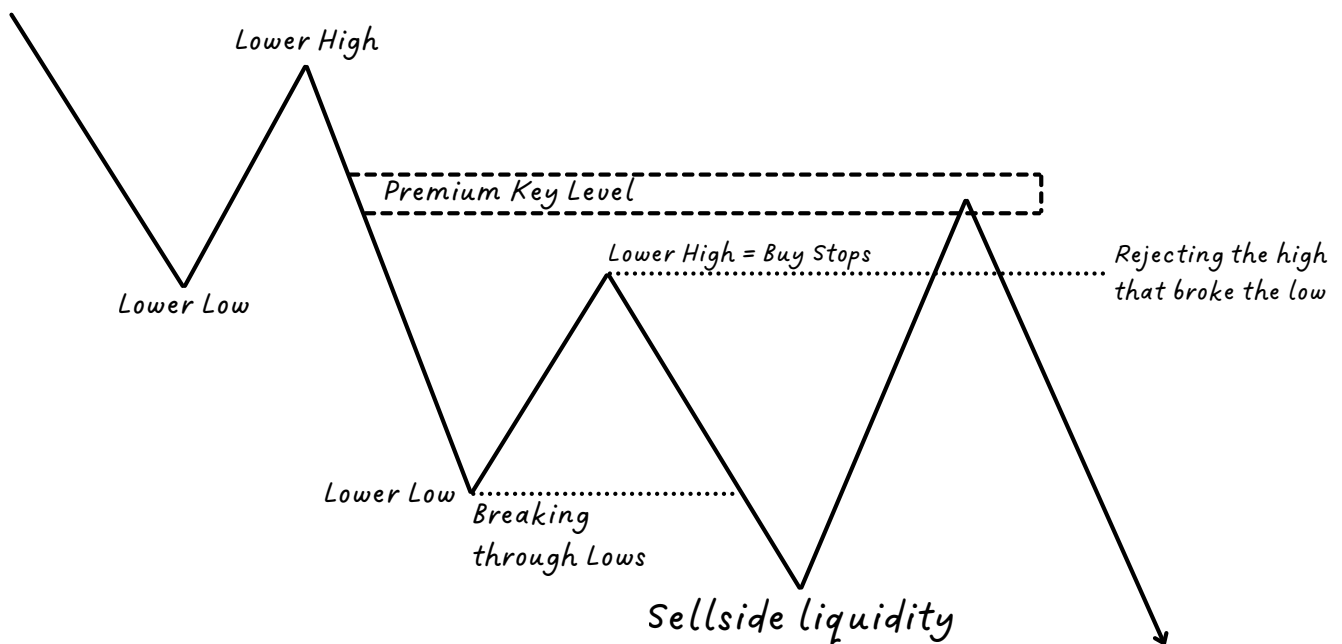

What's the most effective way to trade this?

HTF Key Level > LTF Range High to Low or Low to High > Continuation Purge To Opposing End.

What confirms a continuation purge?

A LTF Double Purge.

Market Profiles: Daily Profile

London Reversal

NY Reversal

NY Manipulation

Seek and Destroy

The MMXM Trader ✓
@theMMXMtrader

Opening Price > Key level > Stop Hunt > SMT > CSD is the foundation of every trade idea.

This applies to the Higher Time Frame & Lower Time Frame trades.

Everything else is noise, nonsense, and a distraction.

8:19 AM · 16 Jun 24 · 161K Views

The MMXM Trader ✓
@theMMXMtrader

4hour chart removes the blur.

If the H4 isn't clear, I'm not interested.

Realizing this was one of the turning points in my trading.

🔗 Last edited 5:13 PM · 08 Jun 24

First say to yourself what you would be; and then do what you have to do. -Epictetus

The MMXM Trader ✓
@theMMXMtrader

A higher win rate model with less RR lets you risk more % per trade;

It's easier to make 6% aiming for a 1:3 by risking 2% than it is risking 1% to make a 1:6.

Higher RR is a fallacy.

More capital and or more risk is really how you get rich trading, not higher RR.

The MMXM Trader ✓
@theMMXMtrader

Monthly Candle Bias > Focus On 2 Weeks Of The 4 > Weekly Profile.

2 trade IDEAS per month.

Pyramiding should be the focus after this is determined for more trades, NOT MORE TRADE IDEAS.

8:39 PM · 15 Mar 24 · 48.8K Views

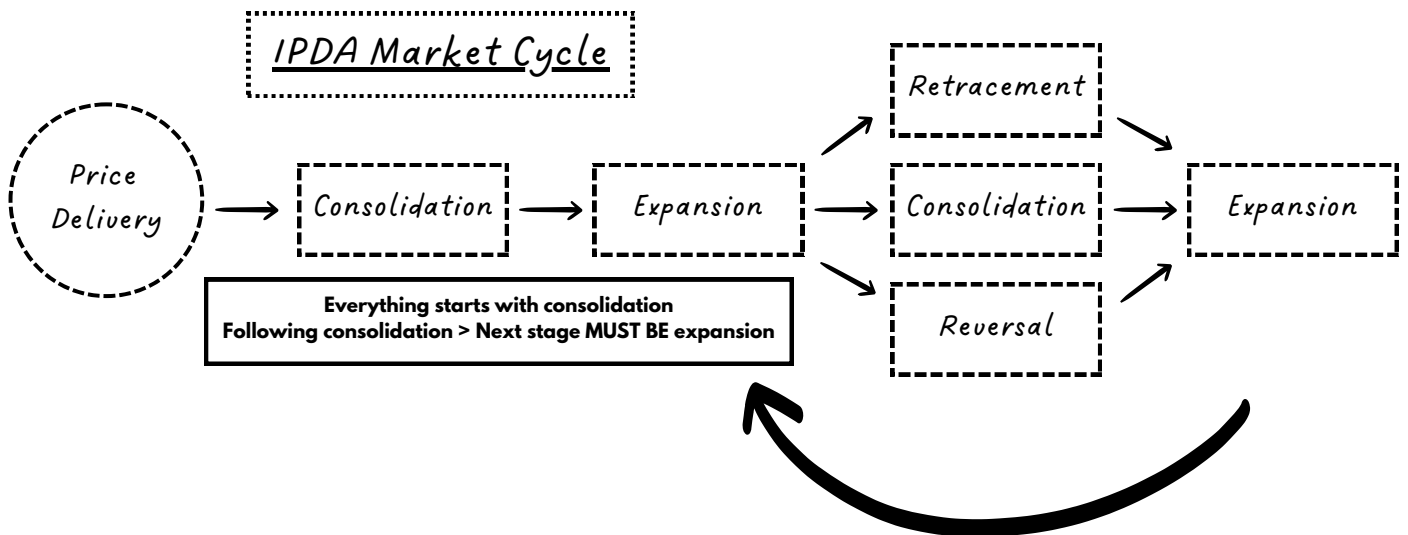

The MMXM Trader ✓
@theMMXMtrader

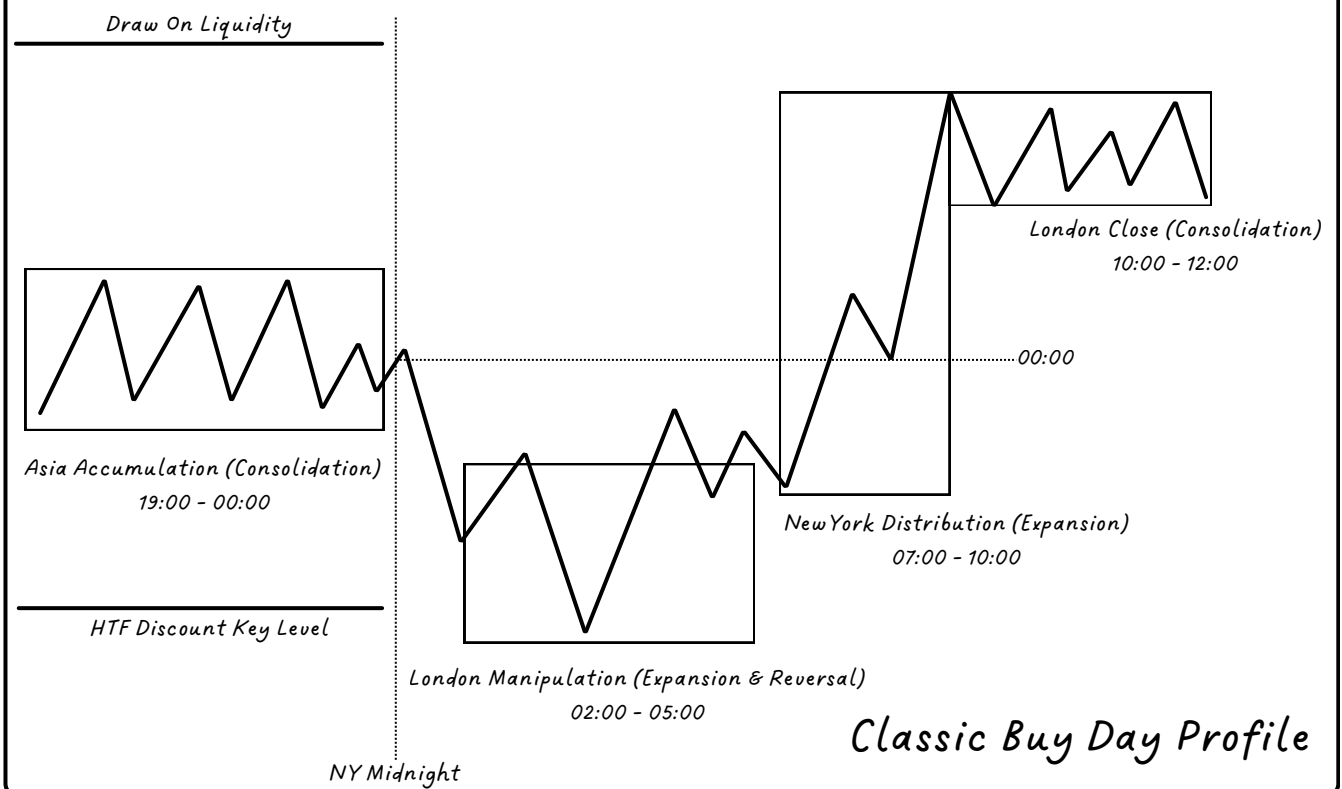

Apply the same logic for Weekly to Daily.

Backtest...

8:41 PM · 15 Mar 24 · 41.2K Views

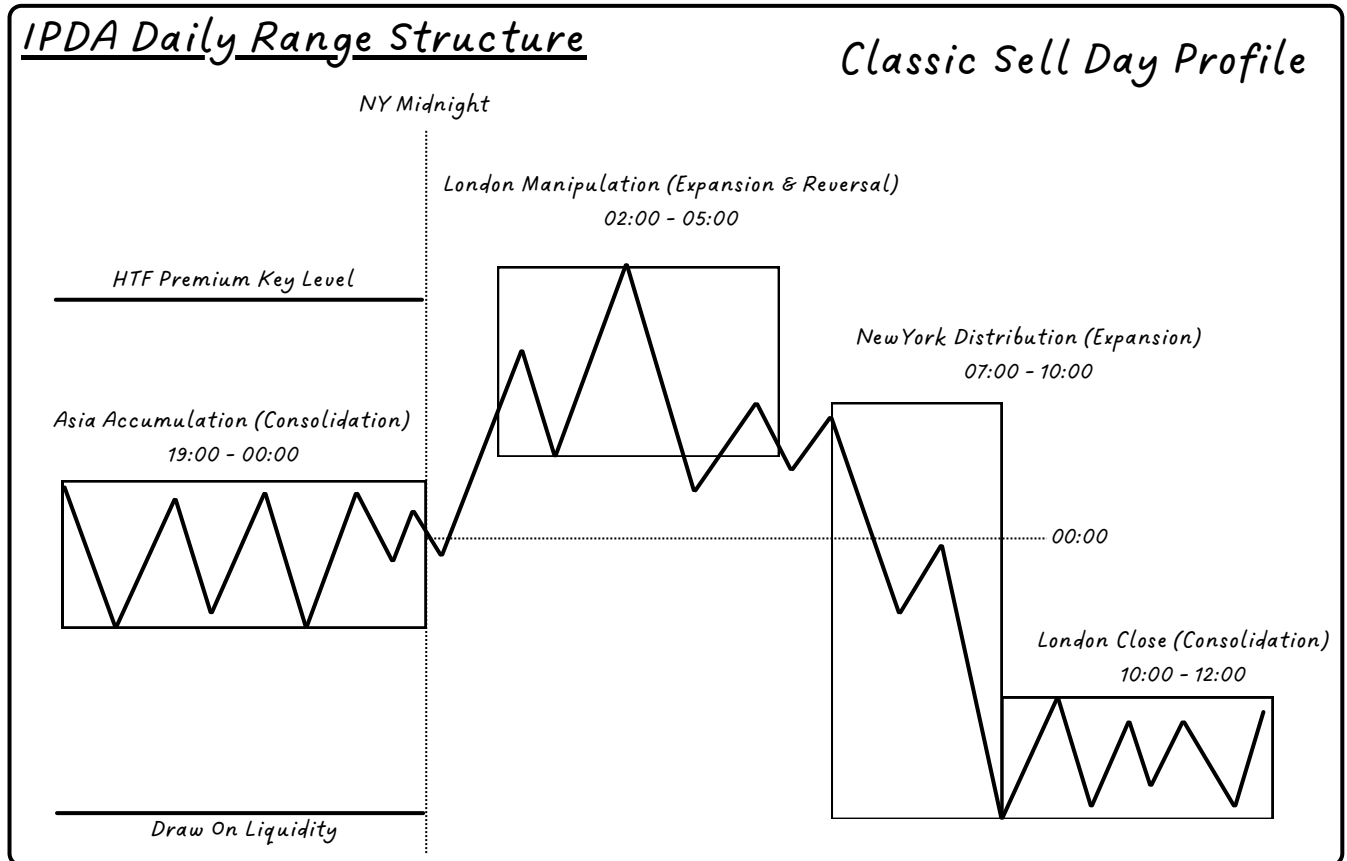

IPDA Daily Range Structure

Understanding this is crucial because:

- It will help you determine the opportune moments to enter the market.
- It will guide you on when to stay out of the market. The pivotal factor is aligning yourself with the market's expansion phase.

Your ability to trust that you are in an expansion phase relies on understanding the previous phases by knowing our position in the IPDA.

What Can Price Do And Not Do?

- When Price Looks Like It's Delivering A Consolidation To Reversal That's A Trap And Will Be Followed By An AMD Reversal Pattern.

Once Price Has Gone From Consolidation To Expansion There's Only 2 Things That Can Happen From The Expansion:

1. Expansion > Reversal Which Would Be An AMD Reversal Pattern.
2. Expansion > Retracement Which Would Be An Return To OB Or FVG For A Continuation Pattern.

Continuation Patterns

Only 2 Things Can Happen Here After It Starts Consolidating:

1. Continuation Expansion From The Consolidation
2. AMD Bullish Or Bearish

For Price To Reverse Here It Has To Go Higher First

TIME & PRICE:

Time:

- Quarterly Shifts
- Seasonal Tendencies
- Opening Price

Price:

- Market Profiles
- Premium & Discount
- ERL/IRL
- Stop Hunt

Our objective is to blend Time & Market Profiles.

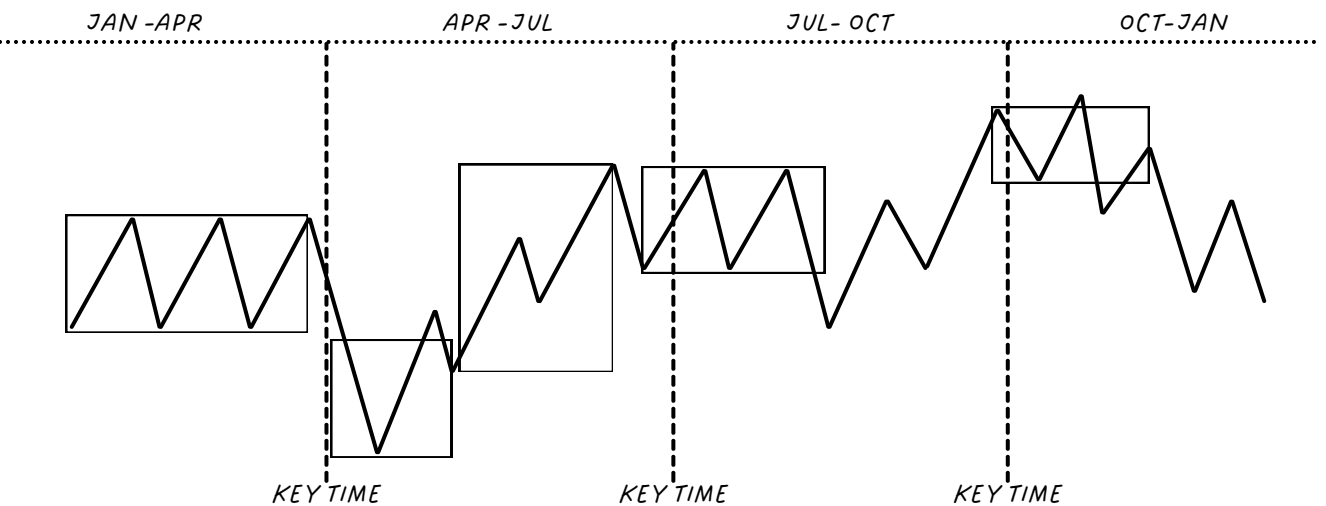

- A market profile will only change at a KEY TIME, aka a new quarter.
- The previous market profiles in the segment of time defined by a quarter
- Aids in our analysis to predict the next quarters market profile.

How do we analyse?

1. Premium & Discount
2. Quarters
3. Market Profile
4. Opening Price
5. Key Level

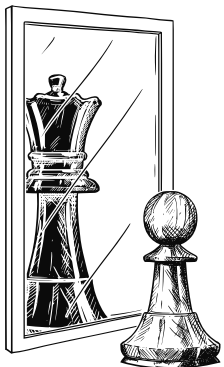

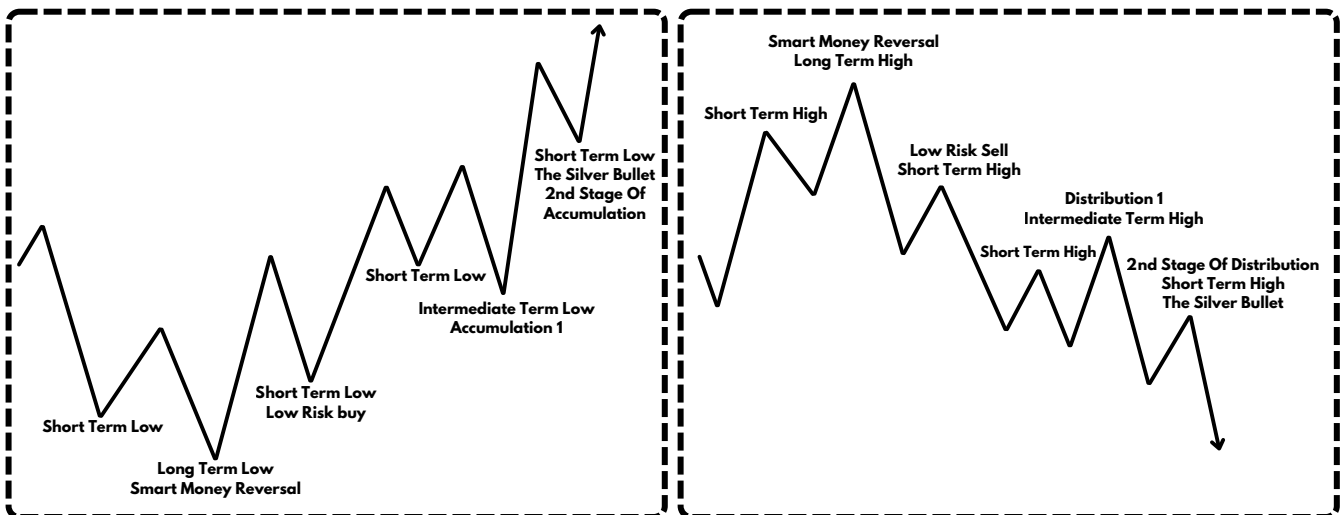

IPDA Market Cycle <--> Quarterly Shifts (Market Profile)

Reference previous quarter market profile.

New Quarter:

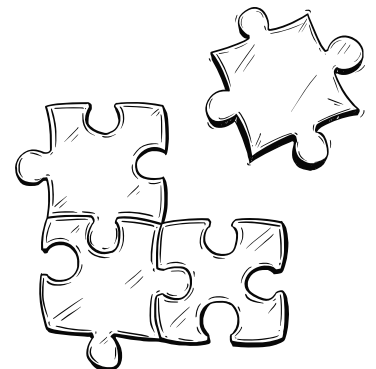

- Market Profiles
- Key Level
- Opening Price
- SMT
- IPDA Look Back
- LTF Range

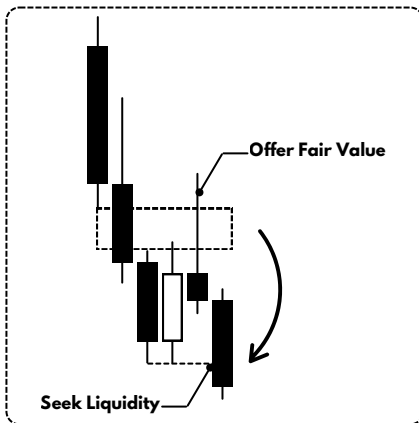

To be a successful trader, you need to have
a complete absence of fear and regret.
Every moment in the market is unique.

Waste no more time arguing what a good
man should be. Be One.

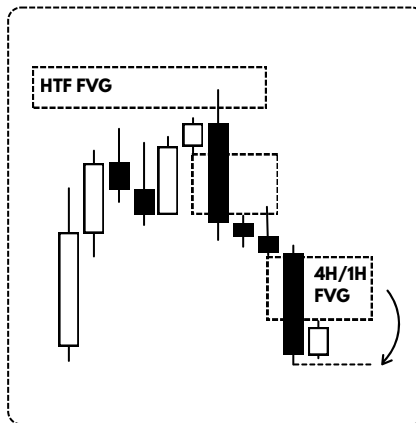

-Marcus Aurelius

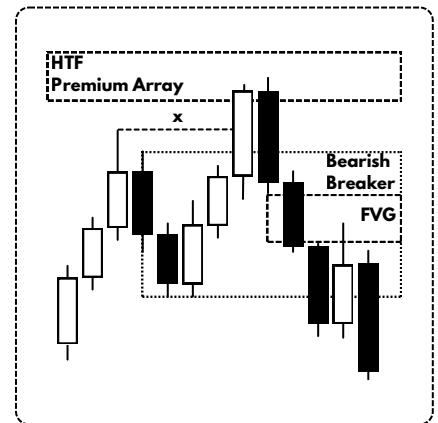

Clear DOL based on HTF

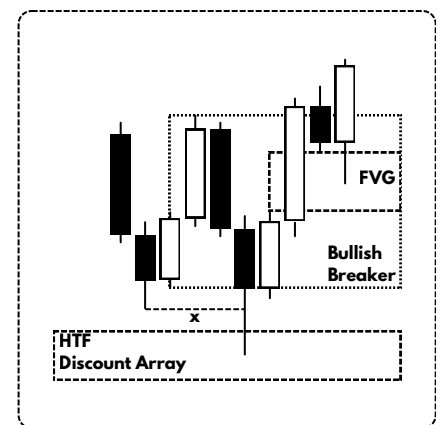

HTF PDA aligned with BIAS

Bearish unicorn Setup

Bullish unicorn Setup

- ✓ Occurs during Killzone.
- ✓ Aligns with HTF Premium/Discount Array (PDA).
- ✓ Includes a Breaker Block.
- ✓ FVG must align with the Breaker Block.
- ✓ Candle closes above the breaker.
- ✓ Stop loss covering the breaker.

To achieve a state of objectivity, you need to operate out of beliefs that allow for anything to happen.

To be a successful trader, you need to completely accept that you have no control over the market.

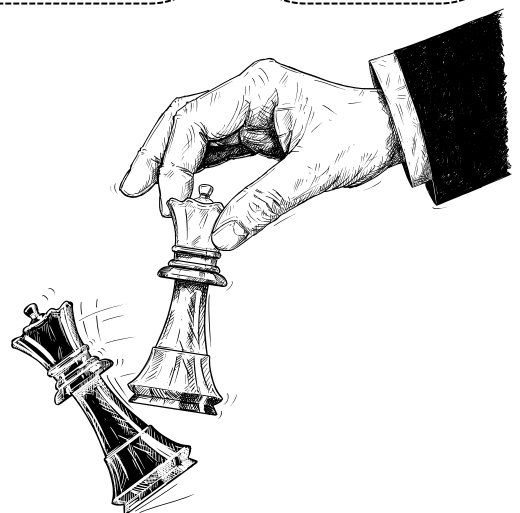

Emotional discipline:

Let go of things that you can't control. Your goal as a trader is to fight today and live for another day.

The one thing you can control is yourself.

In trading, you need to be able to shift your perspective to notice alternative possibilities.

-Mark Douglas

Psychology:

Keep Grinding.

Always remember why you started trading. Probably to get rich, right?

You will never get rich if you're gonna let your psychology affect your trading. Always do your best to stay patient, calm, and mindful while trading these markets. Never go against your own rules and if you start to feel stressed and your mental clarity slowly goes away, close the charts. Never trade if you're feeling bad.

Stop trading if you feel...

- anxious
- tilted
- tired
- greedy
- in a rush
- pressured to make money

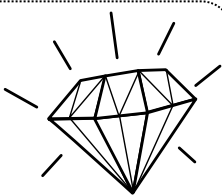

Don't Rush

Stay calm

Wait

Execute

Detach from the outcome

Track your emotions before, during, and after a trade Don't repeat the same mistakes.

Ask yourself:

1. Why do I have these emotions?
2. How did they affect my execution?
3. How can I solve these emotions?
4. What problems did I face this week?
5. What lowered the overall performance?
6. What actions can I take next week to improve my overall performance?
7. What did I do well / what did I learn that I want to carry through to next week?

NEXT LEVEL TRADING:

WEEKLY REPORT

- Trade Quality
- Entry Strategy / Execution
- Trade Management
- Risk Management
- Exit Strategy / Execution
- Opportunities Taken

In trading, you need to handle rejection—make a decision, stick to it, and if it goes against you, take the loss and move on.

You have to understand that even if your model occurs

That doesn't mean you have to take it

Now you know when it's low probable

So, you will be well organized with only high probable setups

By detachment from the outcome

Don't focus on the P/L

Focus on building the right habits

And the edge will come

After understanding this

Your trading plan will be able to avoid unnecessary losses

That's where your wins will matter

The rest is about following the plan. It's you vs you. Everyday.

Be Cold minded. Fuck your tired body.

Growth is painful, But worth it.

Take the biggest fucking risks of your entire life right now. LOCK IN.

Be Disciplined.
