

Double Purge Theory (DPT)

An Enigma To Trading

What is the Double Purge Theory by The MMXM Trader?

The double purge is a specific occurrence in price action that involves the manipulation of liquidity by knocking out both buyers and sellers before the REAL MOVE occurs.

Why do you need to have double purge in your toolbox?

Markets will only reverse when the price knocks out both participants in the market.

- The run of both sides leads to low-resistance liquidity runs.
- The double purge is also where your SL will be safe given you have the correct narrative.
- True PD Array's such as OBs and Breakers form after the Double Purge.

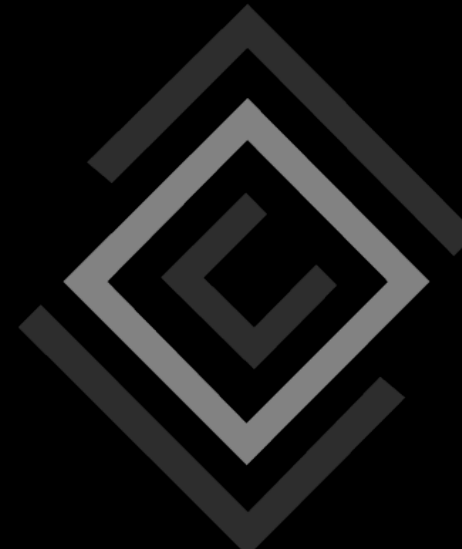

Market Profiling;

Signatures of bullish IOF: Breaking through highs and rejecting lows. In bullish markets, the market will **first run the buy-side with closes above the high and then run for the low that broke the high and reject it.**

Signatures of bearish IOF: Breaking through lows and rejecting highs. In bearish markets, the market will **first run the sell-side with closes below the low and then run for the high that broke the low and reject it.**

Focus on 3 different formations of the Double Purge;

1. **The Classical Market Structure Trap**
2. **The One Candle Purge**
3. **AMD Purge**

The Double purge can be used for both Reversals & Continuation patterns.

It's more effective in the direction of the DOL as a continuation pattern.

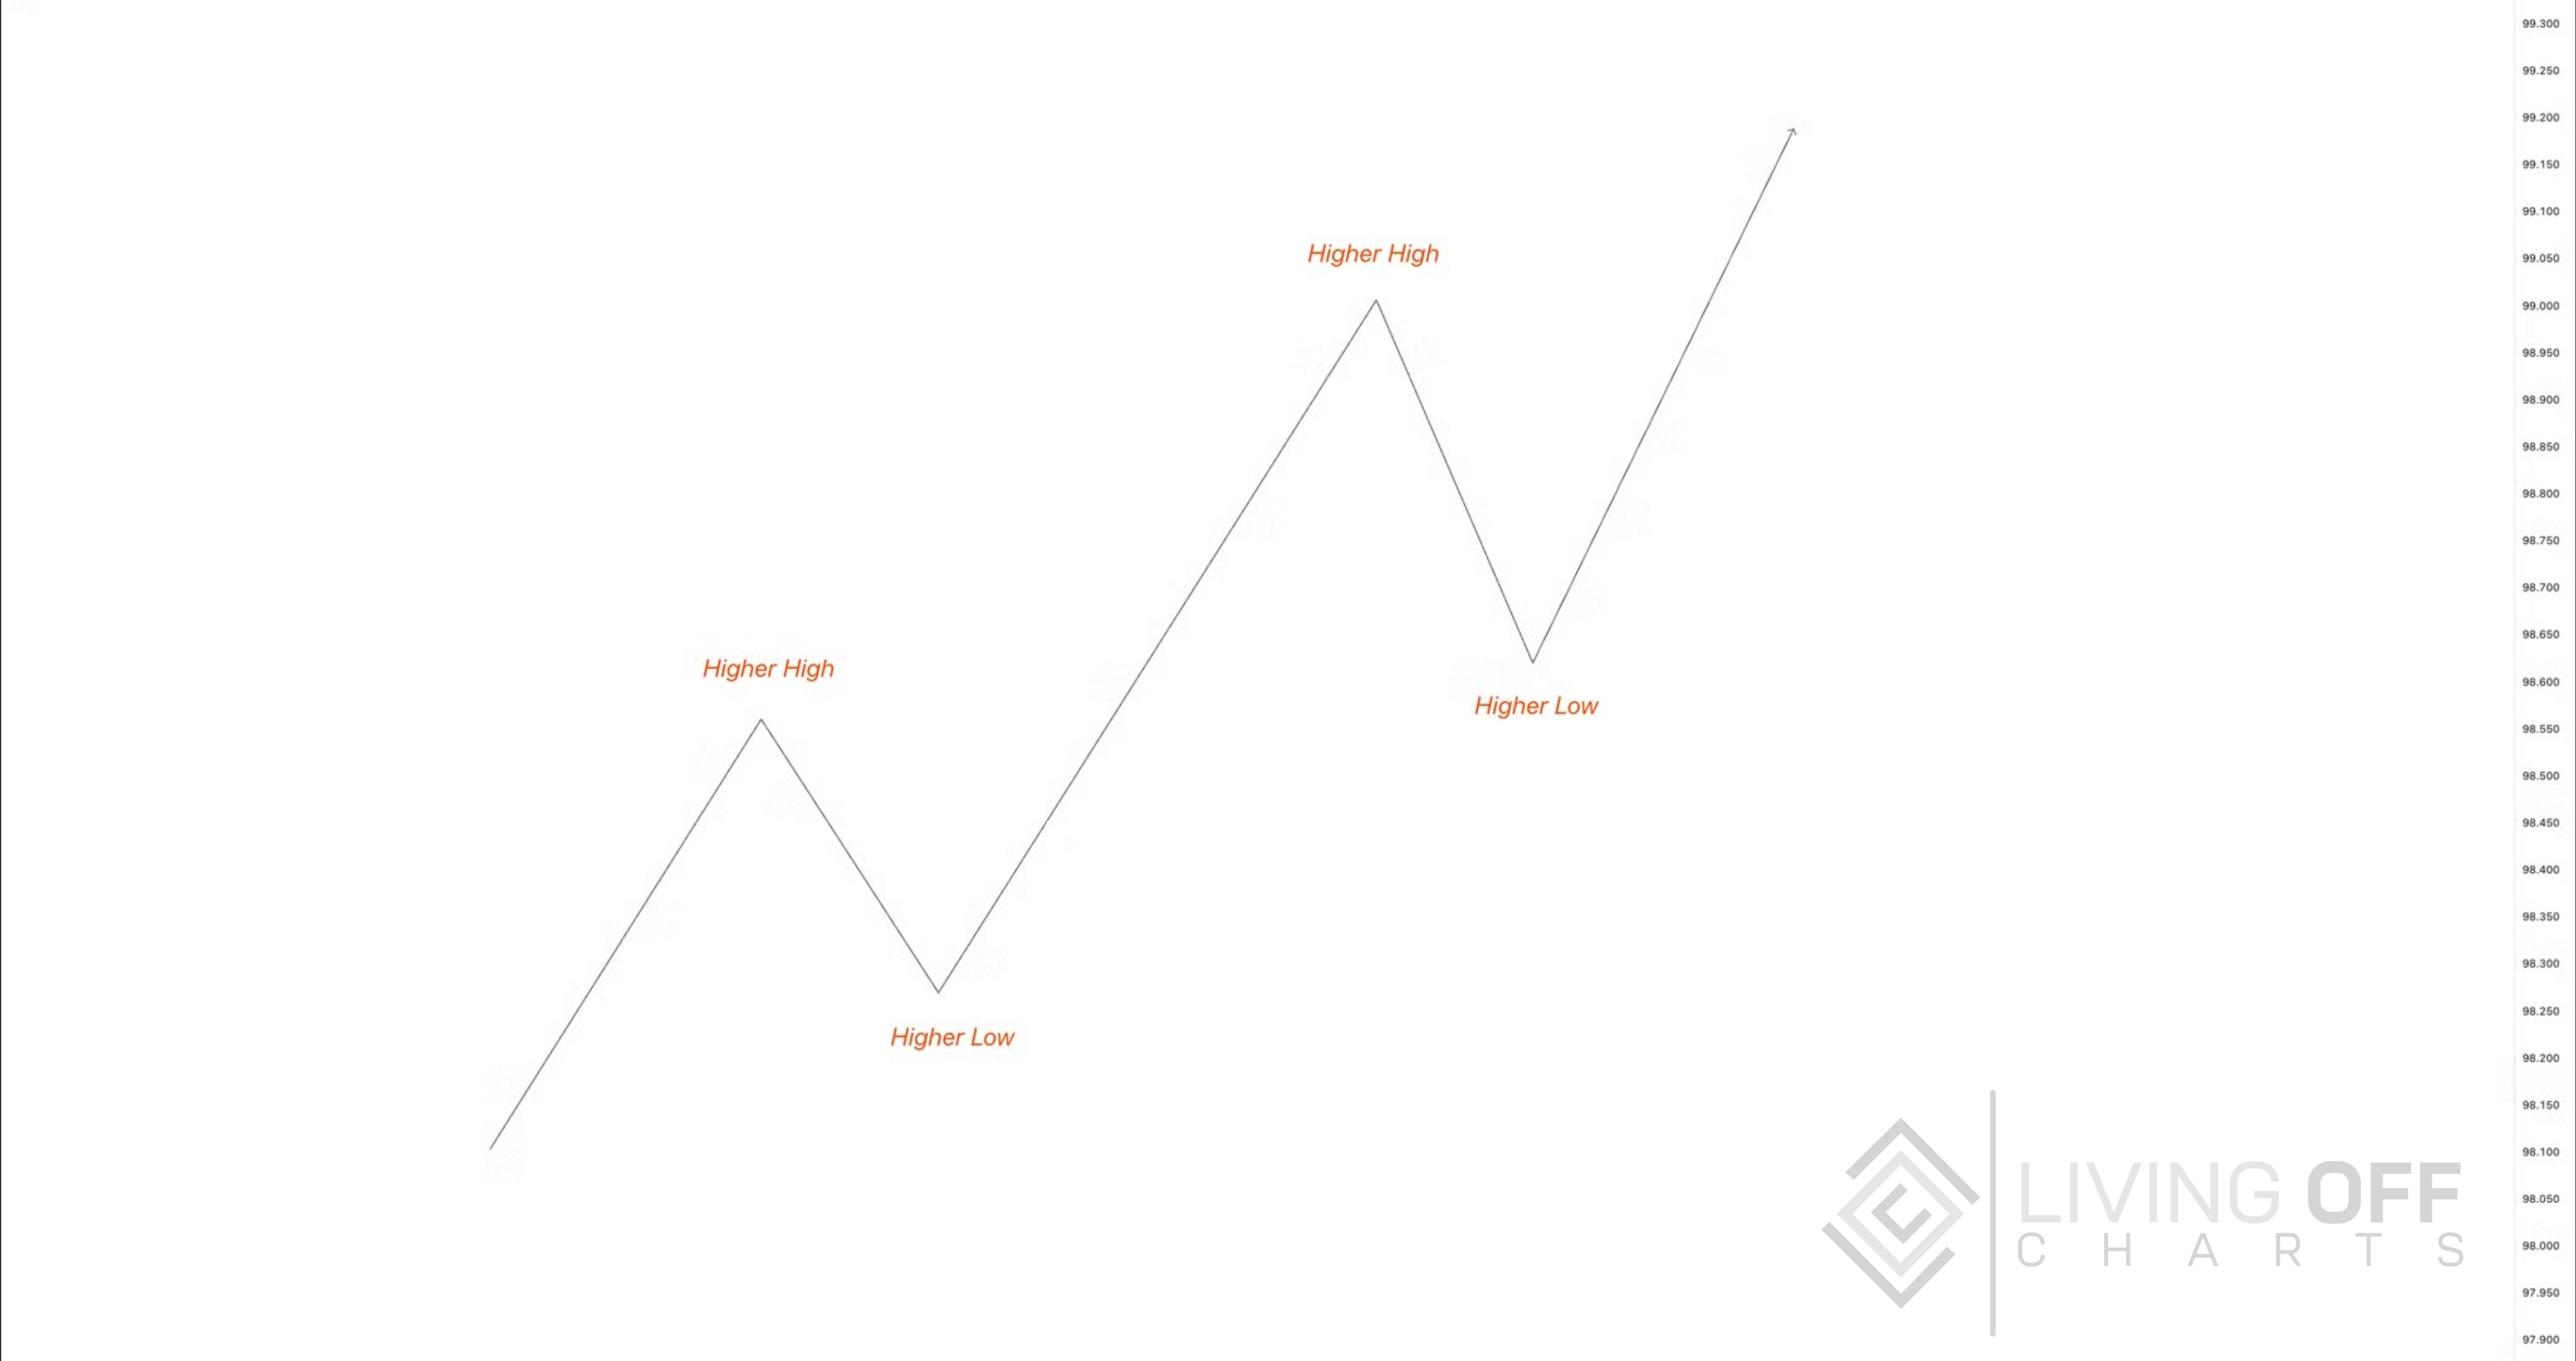

What's the most effective way to trade this?

HTF Key Level > LTF Range High to Low or Low to High > Continuation Purge To Opposing End.

What confirms a continuation purge?

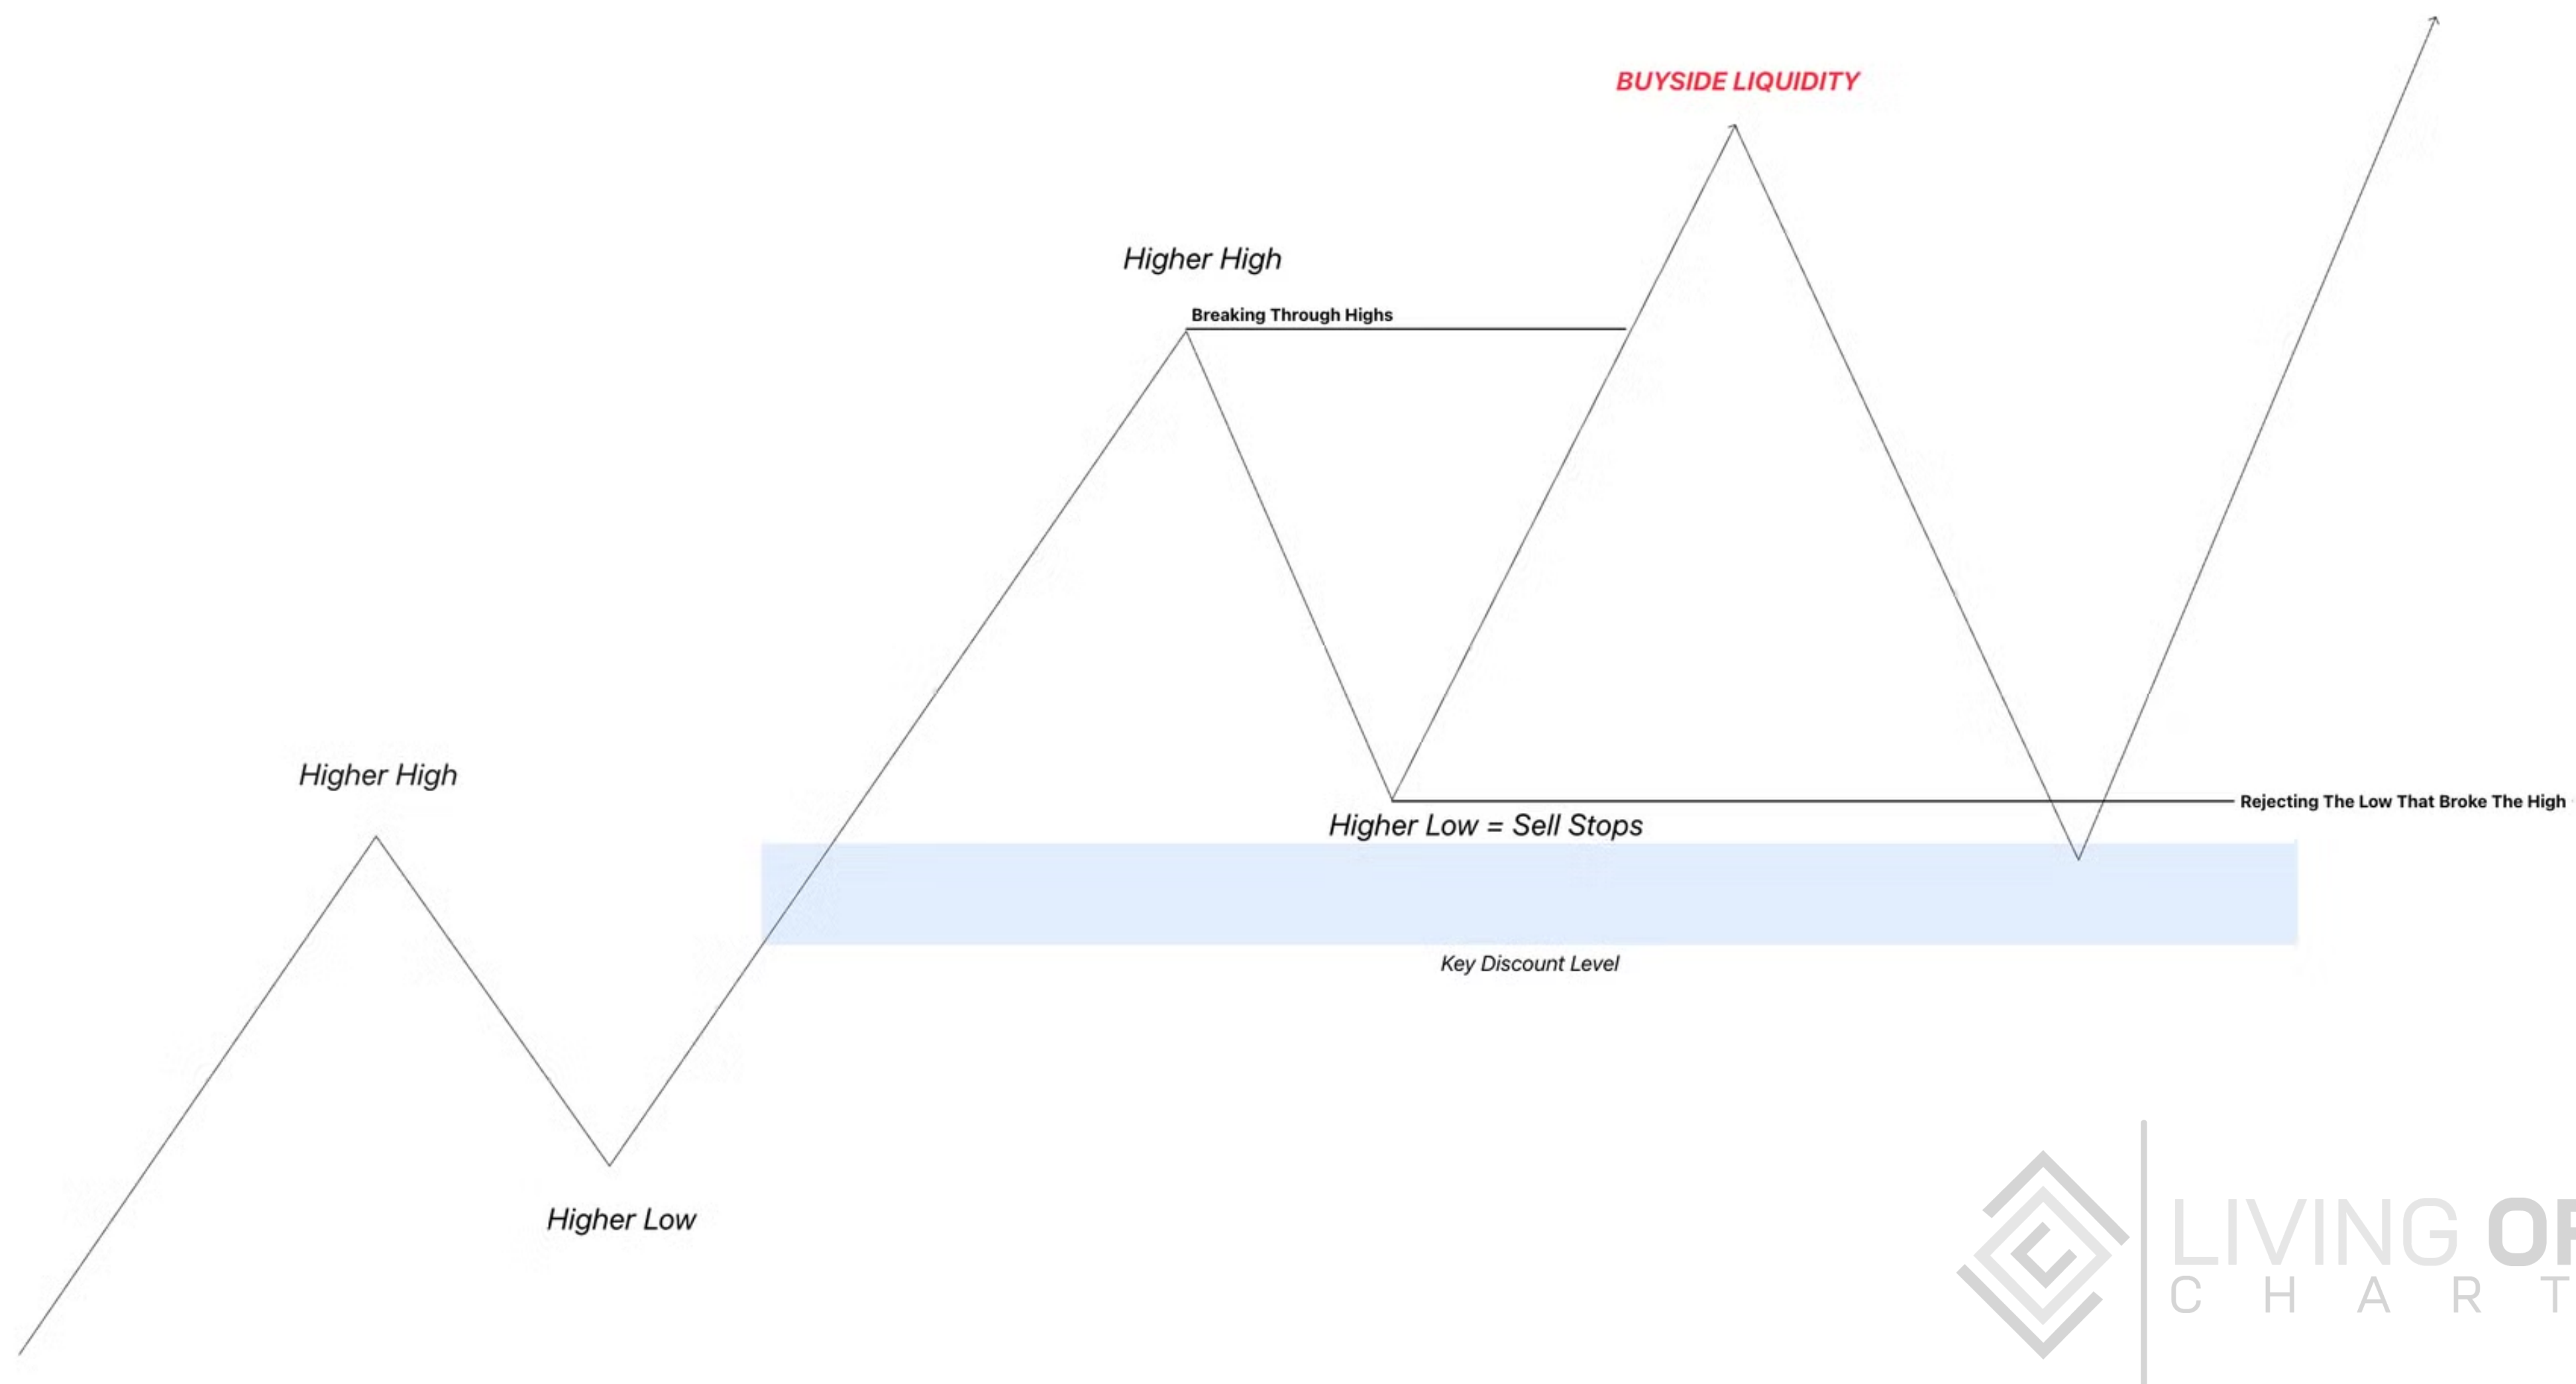

A LTF Double Purge.
