## Breaking down these 3 longs called in the Discord Group

# OFFSET ACCUMULATION & RE-ACCUMULATION

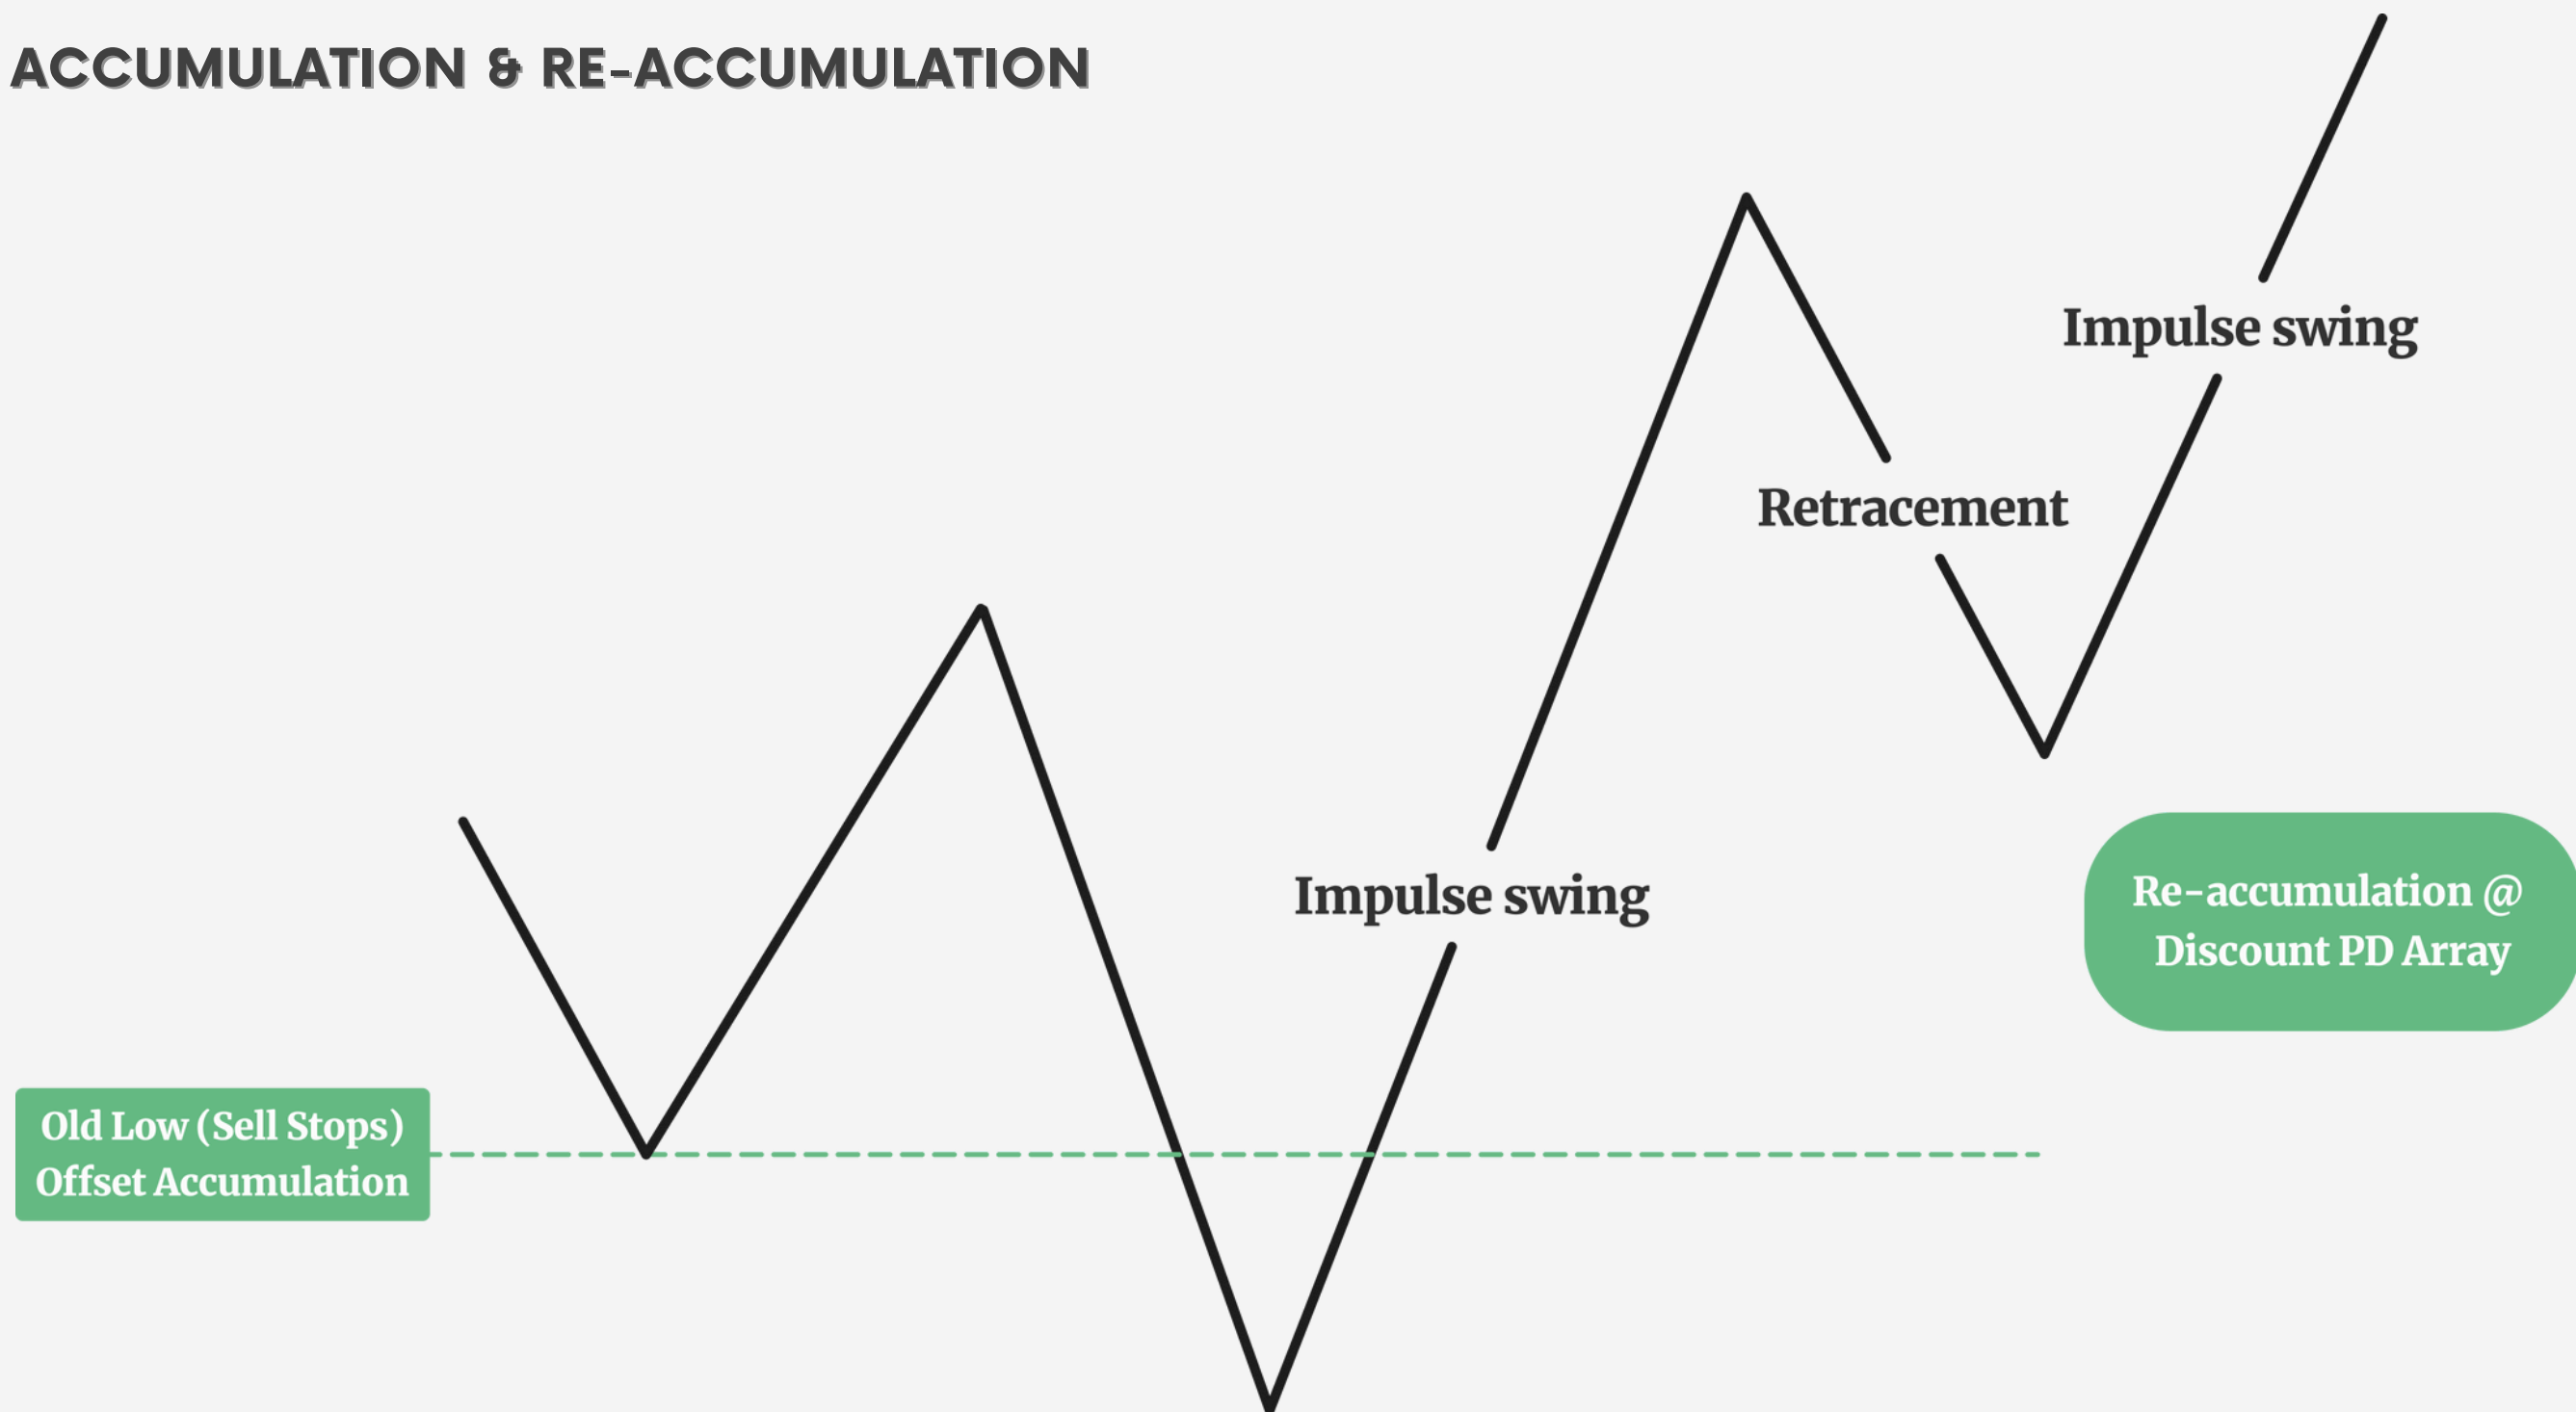

## What is “Offset Accumulation”?

- Offset Accumulation is a **stop run on sell stops below the market place to drive price higher to buy stops resting above the market.**
- We look for accumulation of sell stops when we are anticipating higher prices.
- **Sell stops resting above a key HTF Discount PD Array are even more significant.**

## What is “Re-Accumulation”?

- Re-Accumulation is the **impulse price swing that occurs from a retracement after an “Offset Accumulation” (Run on sell stops).**
- We want to **position ourselves in a Re-Accumulation phase from the HTF to LTF.**
- Positioning ourselves in a Re-Accumulation phase top down confirms we are on the correct side of the IOF.

## OFFSET ACCUMULATION & RE-ACCUMULATION

**BULLISH SCENARIO**

# OFFSET DISTRIBUTION & RE-DISTRIBUTION

## What is “Offset Distribution”?

- Offset Distribution is a **stop run on buy stops above the market place to sink price lower to sell stops resting below the market.**
- We look for distribution after buy stops have been raided when we are anticipating lower prices.
- **Buy stops resting below a key HTF Premium PD Array are even more significant.**

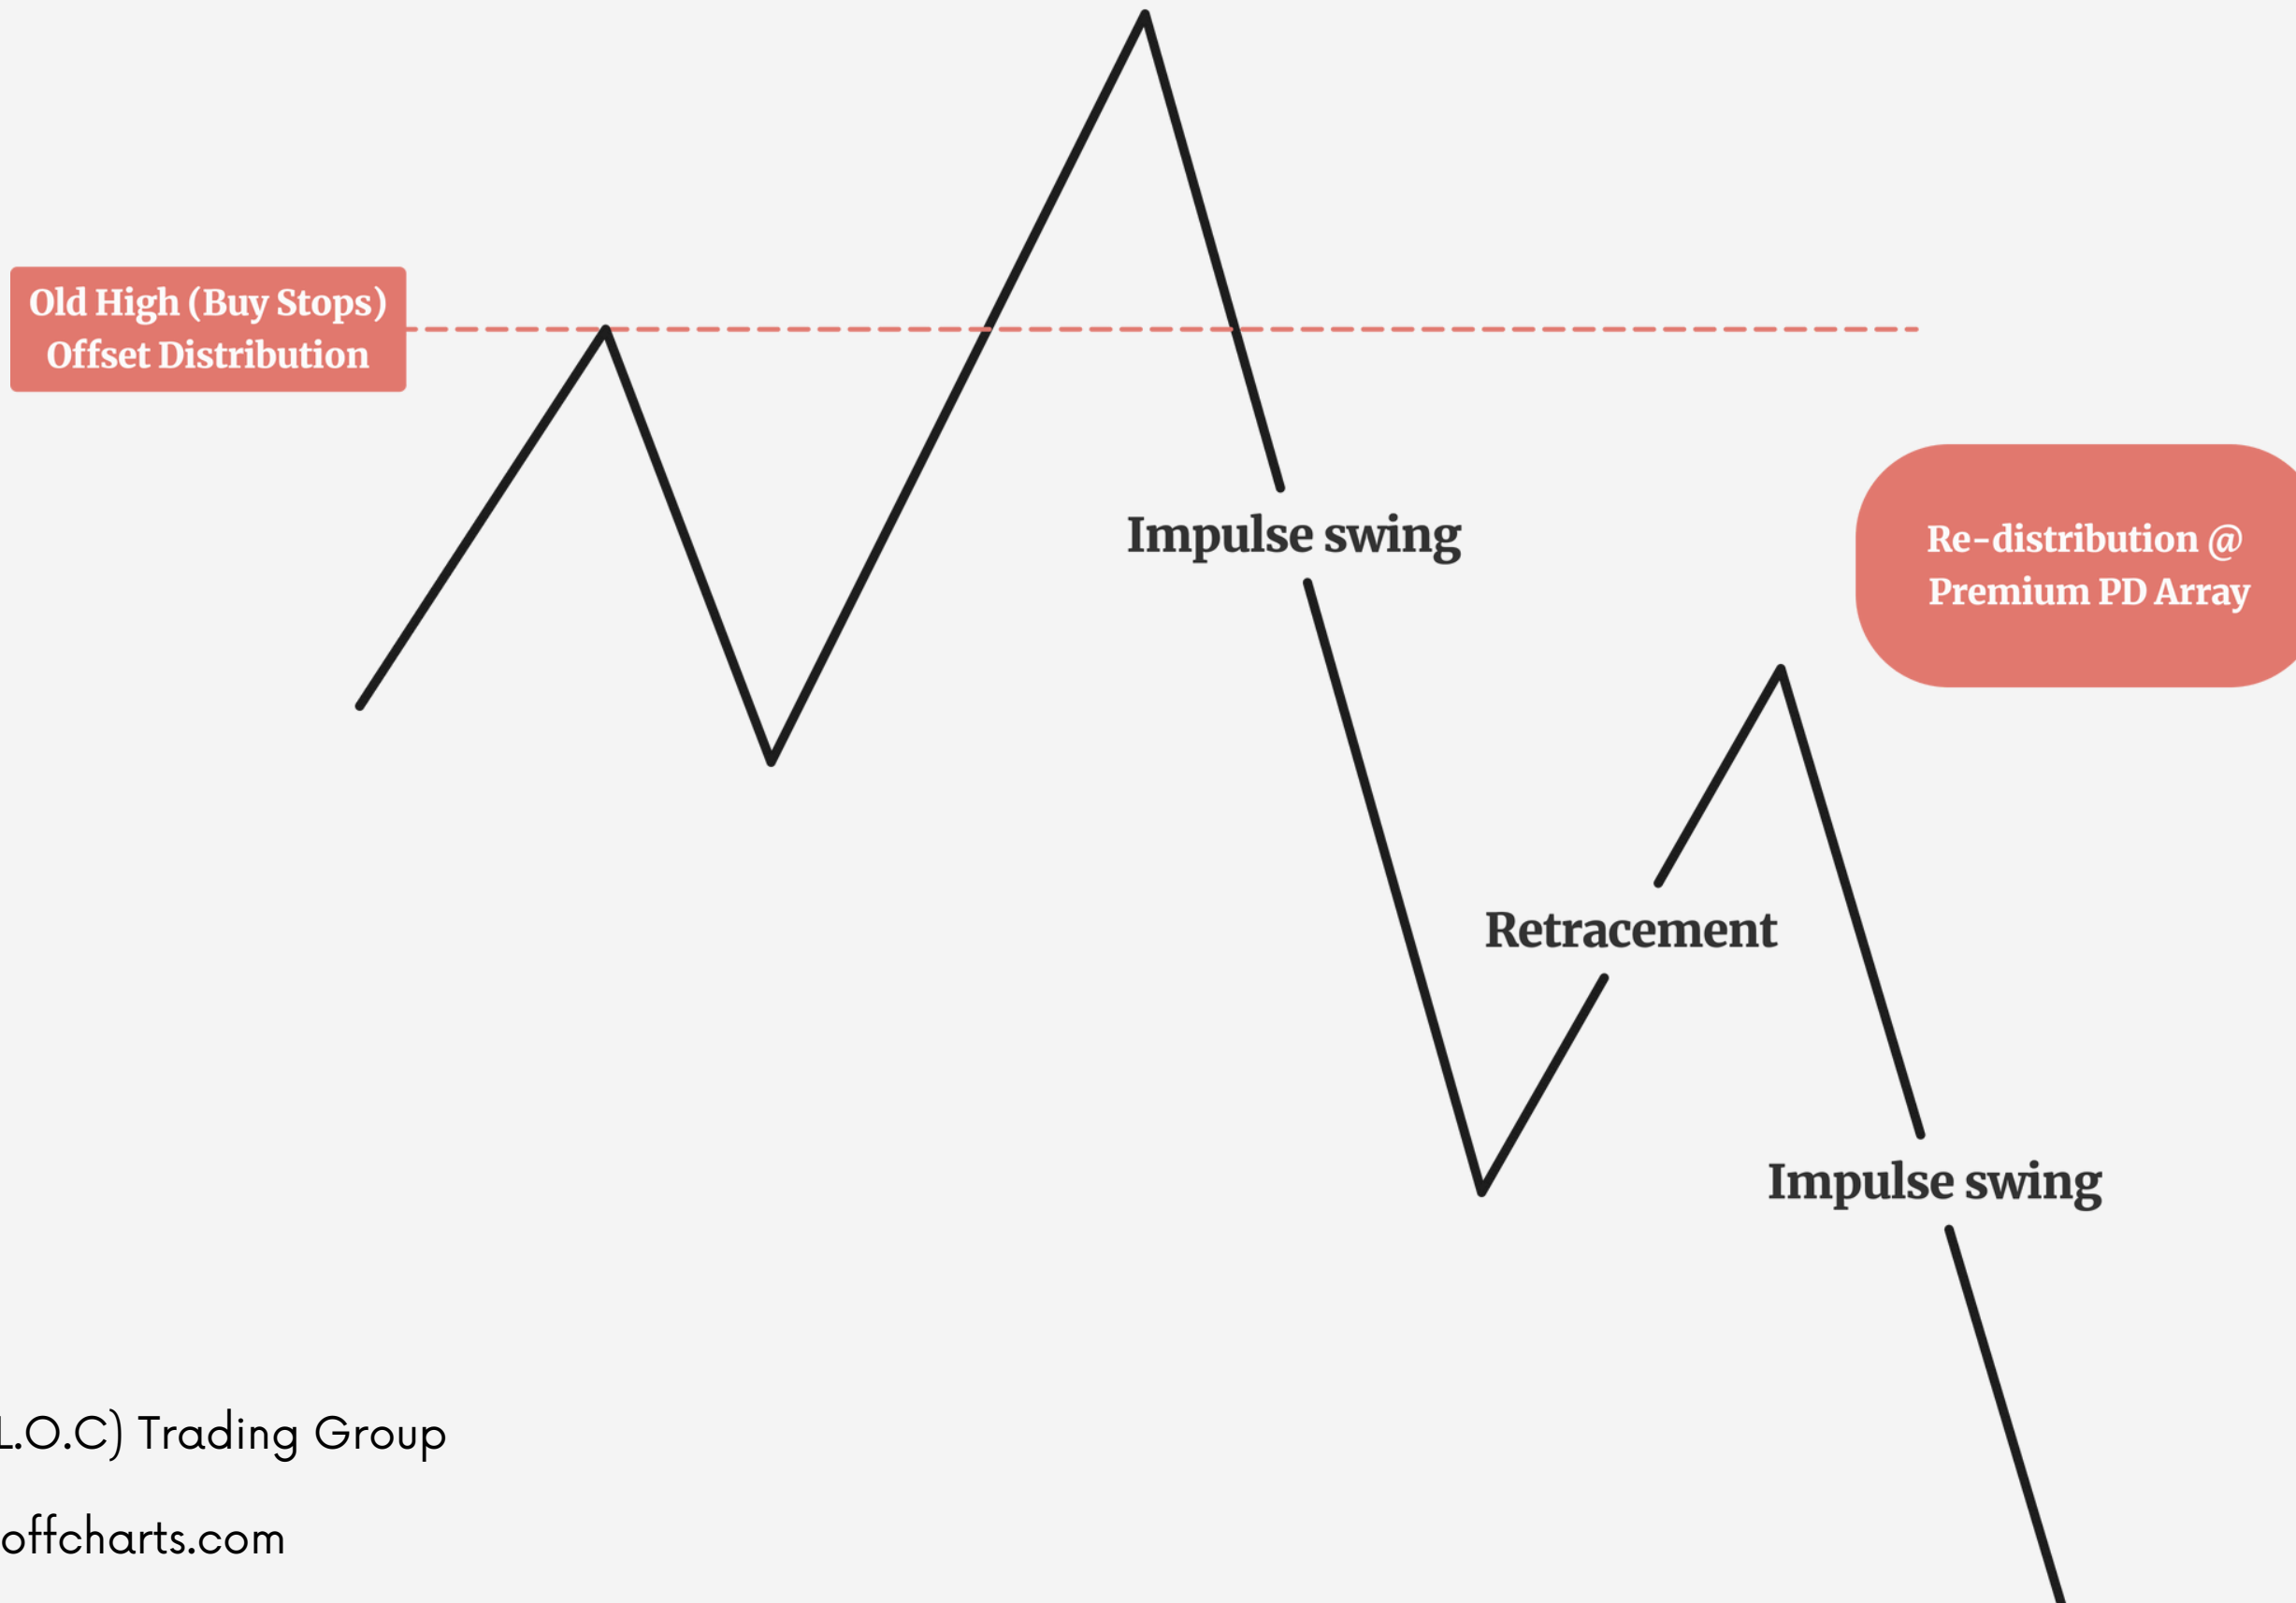

## What is “Re-Distribution”?

- Re-Distribution is the **impulse price swing that occurs from a retracement after an “Offset Distribution” (Run on buy stops).**
- We want to **position ourselves in a Re-Distribution phase from the HTF to LTF.**
- Positioning ourselves in a Re-Distribution phase top down confirms we are on the correct side of the IOF.

# IPDA 20 DAY LOOK-BACK FOR DAY TRADING: BULLISH BUY PROGRAM

- From the previous day of your trade idea you count **20 days** looking back.
- Determine the **high** and **low** of that range, we will be buying in **Discount** or at **Equilibrium**.
- Locate and annotate the Bullish PD Array's.
- **A swing high must be broken through in the past 20 days.**
- We wait for a **Previous Day Low to be raided**.
- We target Previous Day High's within the last 20 days with a final objective being the 20 day high.

@everyone

USDCAD;

Continuing with the longs on UC we called yesterday on the stream at the low of the day, would like to see structure form after running this low for today's expansion.
