

March Monthly Recap

Here are the trades I have taken in March, apologies for how long it took for me to get this out.

A brief description of my model, we look for a draw on liquidity, then manipulation in the opposite direction at the open, followed by a shift back toward the draw. This is the Unicorn Model

1.Draw on liquidity:

Target is smooth edges of the Asia session range (20:00 to 00:00 NY) equal highs or lows holding liquidity.

2.Opening manipulation:

At the 09:30 NY open, manipulation in the opposite direction of the draw. This move is intended to trap traders and induce liquidity before the true move begins.

3.Reversal and entry:

After the manipulation, look for a shift in the direction of the draw. Entry is based on a breaker combined with FVG

*Unicorn
Model*

March 3rd

Model Used: Unicorn Model - [Link](#)

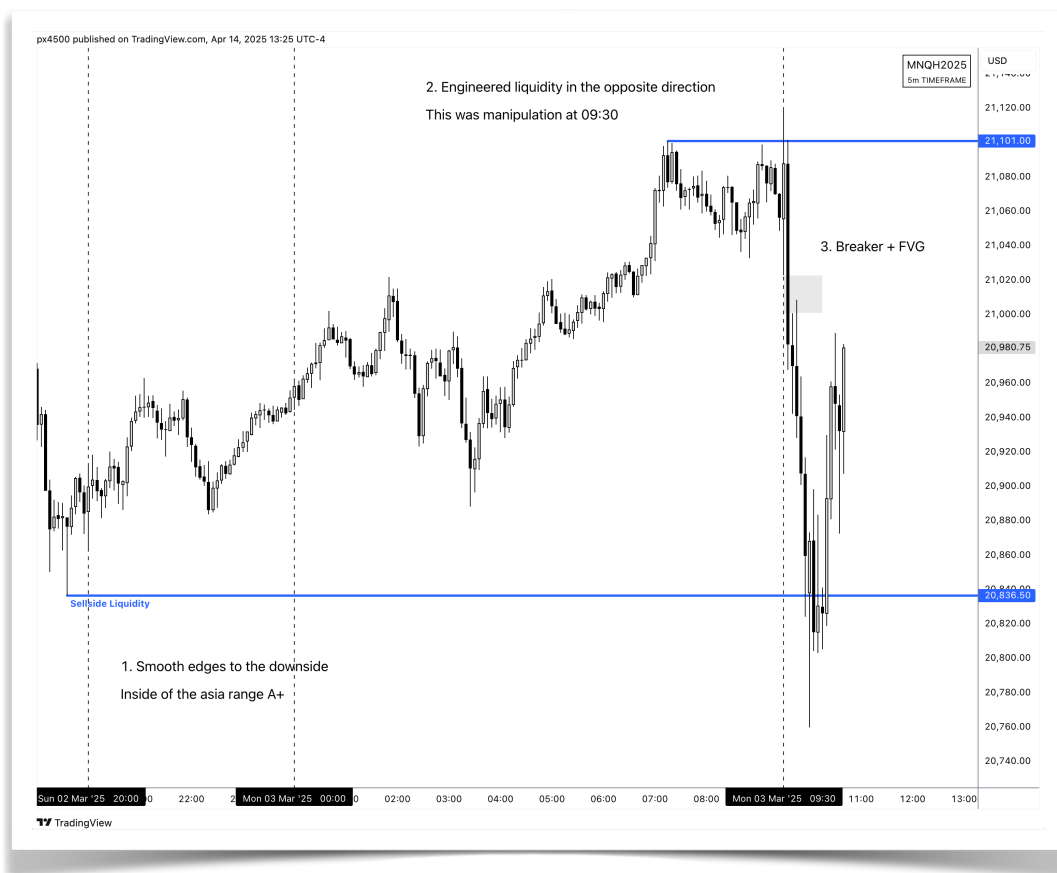

Trade Description: Price cleared engineered liquidity to the upside (opposite direction to our draw) at open price, before displacing towards our Sellside liquidity

Take notice how price built those equal highs just before the open, its purposefully engineering liquidity, to clear, trap traders and reverse.

Note all 3 time labels.

- Manipulation: Textbook example 9:30
- Draw on liquidity: Occurred during Asia range

Visual Recap:

March 4th

Model Used: Unicorn Model

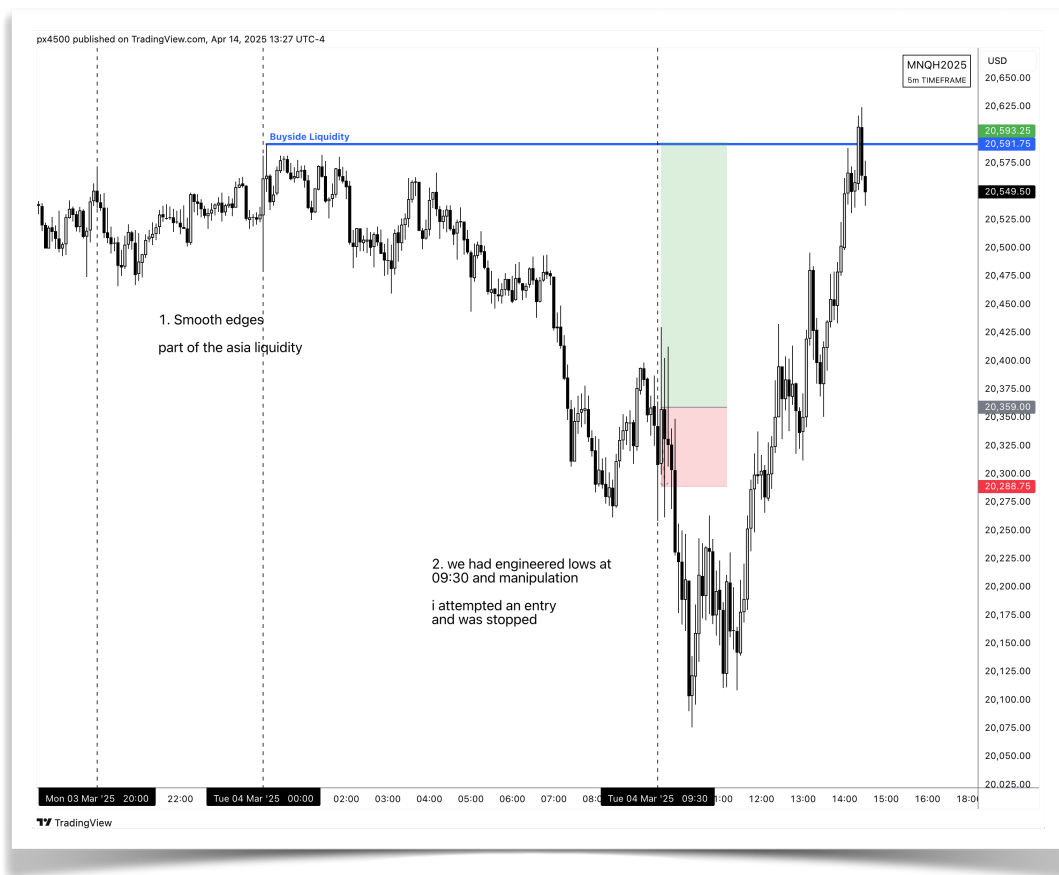

Trade Description: We had smooth edges to the upside around the asia range although they were not perfect, which shouldn't have been the biggest tell. Price then had a sharp move to the downside at 09:30, I entered impatiently and took a loss.

Price eventually took the high, I was wrong on the manipulation.

Note all 3 time labels.

- Manipulation: Was incorrect
- Draw on liquidity: Occurred during Asia range

Visual Recap:

March 21st

Model Used: Unicorn Model - [Link](#) - [Link](#)

Trade Description: Price cleared engineered liquidity to the downside (opposite direction to our draw) at open price, before displacing towards our Buyside liquidity

Take notice how price built those equal lows just before the open, its purposefully engineering liquidity, to clear, trap traders and reverse.

Note all 3 time labels.

- Manipulation: Occurred a little early, large liquidity pool, opposing direction
- Draw on liquidity: During Asia range A+

Visual Recap:

March 27st

Model Used: Unicorn Model - [Link](#)

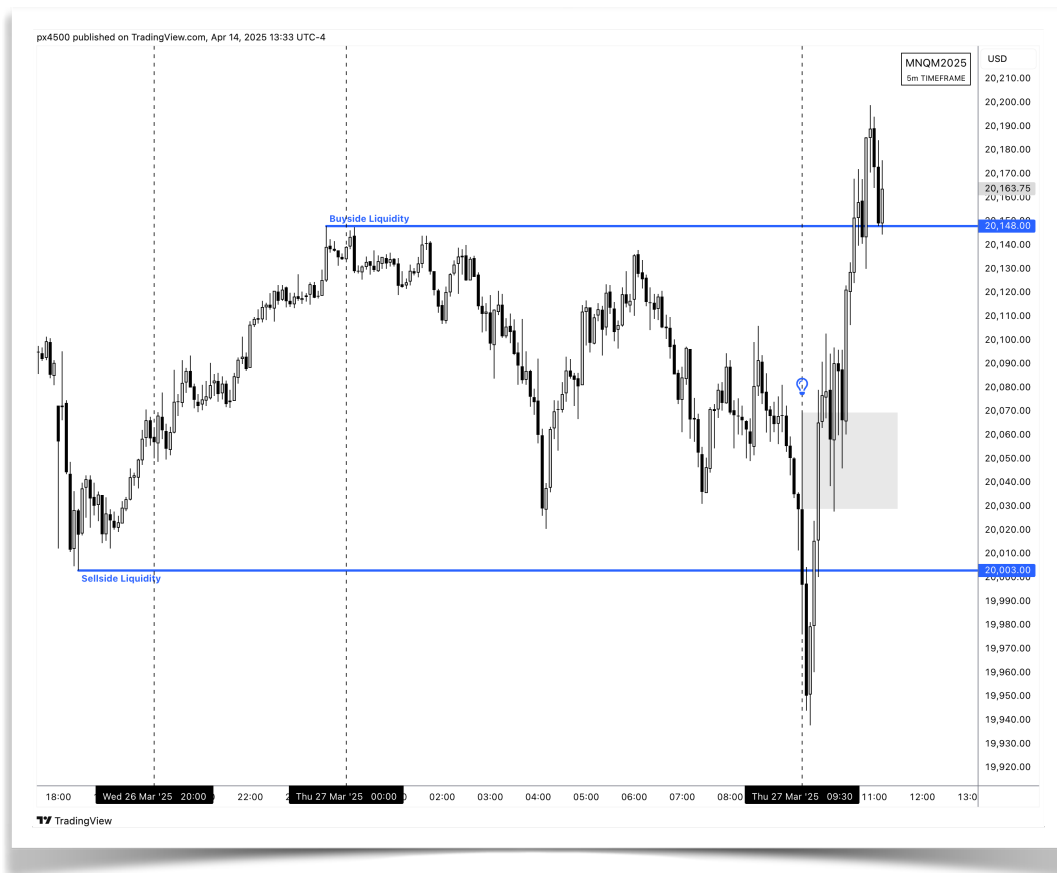

Trade Description: Price cleared engineered liquidity to the downside (opposite direction to our draw) at open price, before displacing towards our Buyside liquidity

Take notice how price built those equal lows just before the open, its purposefully engineering liquidity, to clear, trap traders and reverse. The shift, breaker + FVG are perfect here

Note all 3 time labels.

- Manipulation: Perfect at 09:30
- Draw on liquidity: During Asia range A+

Visual Recap:

March 31st

Model Used: Unicorn Model - [Link](#)

Trade Description: Price displaced in the opposing direction at open price, as our manipulation, ES was a much better example this day and gives reference to this trade.

Our typical components just shown in a bad manner, the charts are not perfect.

Note all 3 time labels.

- Manipulation: Not much liquidity in opposing direction
- Draw on liquidity: During Asia range A+
